## Air Circuit Breakers

## Essential for Today, Potential for Tomorrow

HD Hyundai Electric solely pursues the growth of our customers' business. From power generation to power distribution, we focus on developing and commercializing products and solutions aimed at increasing the efficiency of energy equipment as well as at proactively monitoring and controlling assets in an integrated manner to improve our customers' productivity and management efficiency. We are well aware that our efforts add to the driving force behind our customers' growth and contribute to the creation and maintenance of a more dynamic world. We focus on achieving innovation and strive to evolve continuously to shape a better tomorrow based on today's technological advancement

## Solution

### INTEGRIC

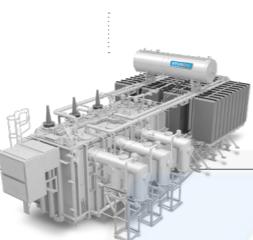

#### Energy Solution

Energy solution business refers to the business of designing, procuring and establishing a system that enables the efficient use of power energy through integrated management of the production, consumption, sales and operation.

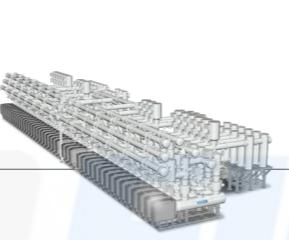

#### Generation(step-up)

##### Power Plants

- Supplied to more than 70 countries around the world for the past 45 over years since 1978
- Satisfies the various demands of customers through the acquisition of quality certifications from international accredited institute
- Participates in the world's key technical committee such as IIGRE and others, pioneering the establishment of technology standard related to power network

**Power Transformer**  
· up to 800 kV, 1,500 MVA

**Gas Insulated Switchgear**  
· up to 800 kV

#### Asset Management Solution

Asset management solution is a business that maximizes the overall business efficiency by systematically managing the performance, risk, maintenance cost and others as well as by providing an asset management solution suitable to the customer's circumstance depending on the product lifecycle (PLC) of various products.

#### Transmission

##### Primary Substation/Secondary Substation

**Gas Insulated Switchgear**  
· up to 800 kV

**Power Transformer**  
· up to 800 kV, 1,500 MVA

**Shunt Reactor**  
· up to 765 kV, 300 Mvar

##### Cubicle GIS

- up to 40.5 kV
- IEC, ANSI, GOST, UL

- Produces high quality products using angle-less type
- Multi-functional digital protection relay (HiMAP) applied
- High reliability secured, provides various operation information such as protection, measurement and control
- Firm external box, size and compact, making it safe
- Maintains high quality through stringent quality control system and continuous research and development

## Utility

- Can be installed in spaces smaller than the open type of substation by using SF<sub>6</sub> gas with outstanding insulation and arc extinguishing characteristics
- Manufacturing advanced products that are resistant to external environment and climate effects through the sealing at the charge part
- Extensive project experiences around the world
- Reduces installation period and cost due to simple installation and transportation, convenient maintenance
- Design considering the safety of the workers as priority

#### Motor & Generator

**Synchronous Generator**  
· Rated Output: < 50 MVA  
· Rated Voltage: < 15 kV  
· Poles: > 2P

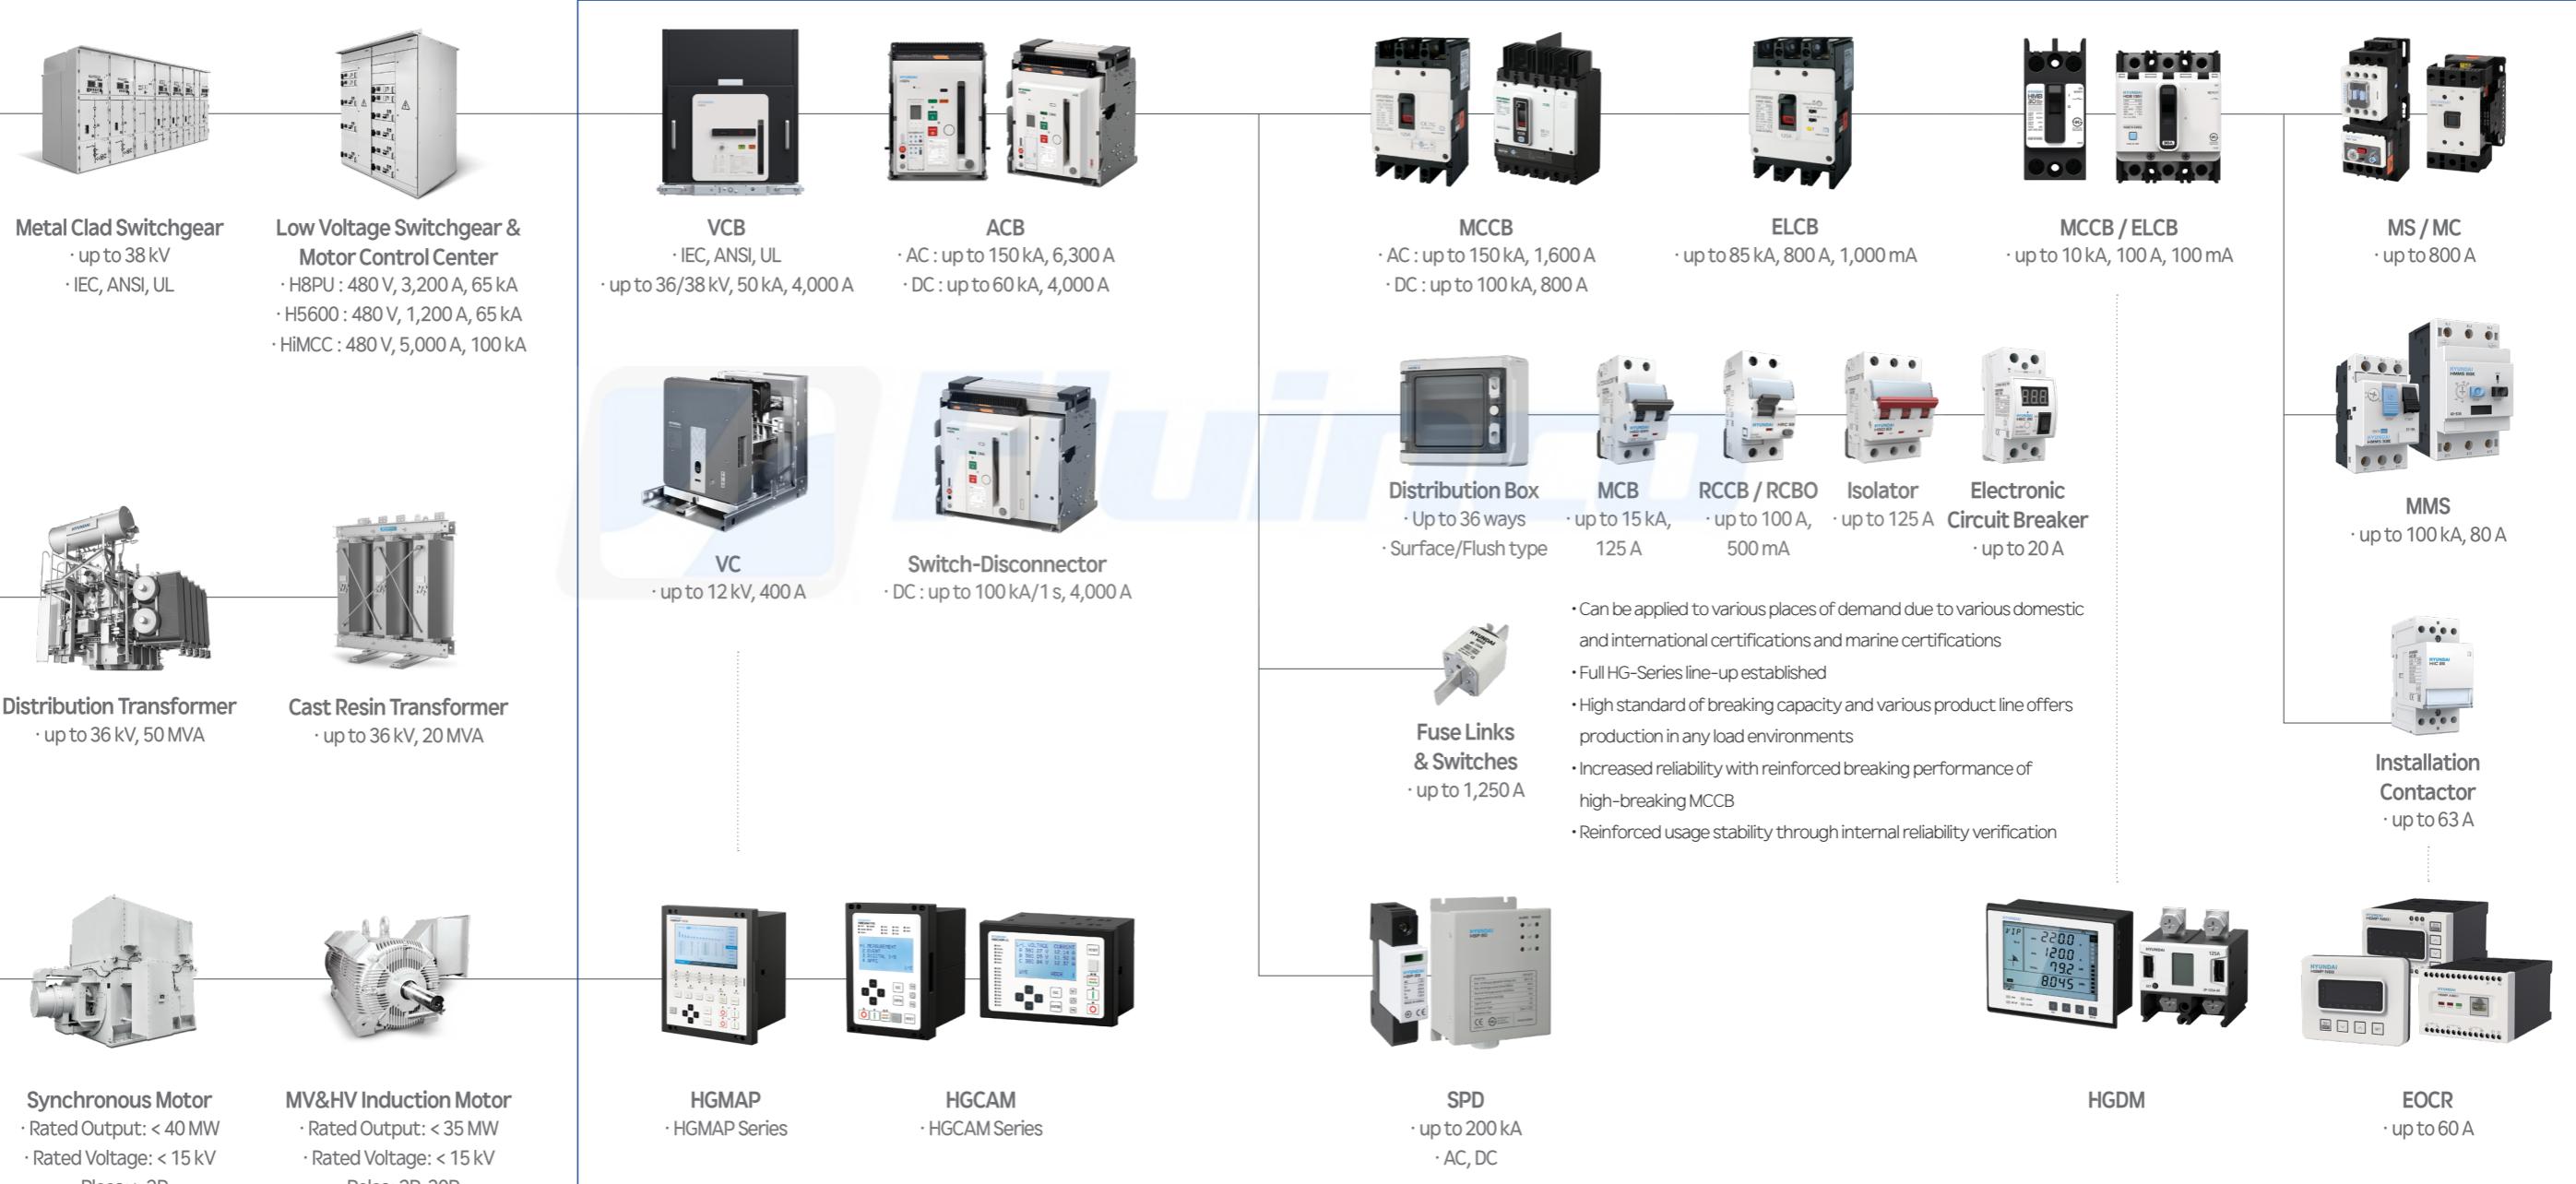

# Marine

## Marine Solution

- Production of high quality marine devices satisfying the regulations and standards of key marine associations (LRS, ABS, DNV, GL, BV, NK etc.) and world's renowned institutes
- High quality safety secured through the latest equipment and stringent quality control system
- Realization of optimal high efficiency by converging SWGR, Generator, Motor, Telecom, Automation, Intelligent Motor Control Unit and others

GREENTRIC

- Enhanced reliability and secured safety with production of products based on the world's best equipment and stringent quality system
- Realized high efficiency by selecting slot based on FEM
- Realized small and lightweight with optimal design based on FEM analysis method
- Satisfies the quality standards of international accredited institutes (IEC, IEEE, CSA, NEMA, API etc.)

**LV Motor**

- Rated Output: < 750 kW
- Rated Voltage: < 690 V
- Poles: 2P-12P

MCCB Rated Breaking Current : Based on AC 440/460 V, HGM L-Type, HGP X-Type

## HG Series

# Air Circuit Breakers

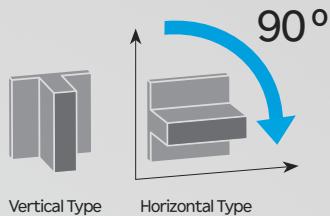

Maximized customer's range of selection and level of satisfaction with model dualization and compact size.

## Characteristics

### Multi

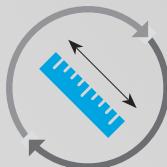

Bus bar terminal  
can be changed to  
horizontal/vertical

Vertical Type

Horizontal Type

### Retrofit

#### Customized Retrofit ACB can be Provided

New products can be developed to be compatible/installed according to the distance of cradle phase/pole/land and terminal size of the ACB that has been installed previously

### Certifications

## Maximum Breaking Capacity

150 kA (At 500 V, HGN D Frame)

## Rated Impulse Withstand Voltage (Uimp) : 12kV

A Frame [85 kA]

630 ~ 2,000A (HGN) / 630 ~ 1,600A (HGS)

## Type per Rating

6 Frames, HGN 2,000/4,000/5,000/6,300 A

2 Frames, HGS 1,600/3,200 A

## 100 % N Phase Current Flow Capacity for all Types

B Frame [100 kA]

630 ~ 4,000A (HGN) / 2,000 ~ 3,200A (HGS)

C Frame [100 kA]

3,200 ~ 5,000A (HGN)

D Frame [150 kA]

4,000 ~ 6,300A (HGN)

P Frame [30kA]

HGN 630 ~ 2,000 A

Q Frame [50kA]

HGN 630 ~ 4,000 A

## Overview and Characteristics

### Air Circuit Breaker (ACB)

**Capable of Responding to Various Customer Applications**  
HG Series air circuit breaker is equipped with high breaking capacity and highly functional OCR, making various customer applications on industrial building, computer center, device industries and others possible. With all models designed with 100 % n phase current flow capacity, the equipment is safely protected against abnormal phenomenon such as harmonics and others.

**Equipped with Various Accessories and Highly Functional Protection Trip Relay (OCR)**

#### Over Current Relay (Trip Relay)

Apart from the basic protection functions, OCR has reinforced power monitoring functions such as temperature monitoring, fault recording and storage etc., enabling stable power supply.

#### N Type

- Overcurrent Protection (L/S/I/G)
- World's First NFC Function Applied
- Fault Recording (10) and Waveform (4 Cycles, Check Via Communication) can be Transmitted to Mobile Phone App

#### A Type

- Overcurrent Protection (L/S/I/G)
- Self Power
- Individual Continuous Power Contact
- Fault Recording (256) and Waveform (4 Cycles, Check Via Communication)
- Communication (MODBUS), External Grounding CT/Earth Leakage ZCT can be used

#### P Type

- Overcurrent Protection (L/S/I/G)
- External Power
- Individual Continuous Power Contact
- Fault Recording (256) and Waveform (4 Cycles, Check Via Communication)
- Over-Voltage/Under-Voltage, Power, Power Factor, Energy Display

#### H Type

- L/S/I/G Functions
- External Power
- Individual Continuous Power Contact
- Fault Recording (256) and Waveform (4 Cycles, Check Via Communication)
- L/S/I/G Minute Current Adjustment
- Voltage/Current Harmonics (1 st ~ 63 th) Analysis
- View 3 Phase Waveform

#### Bus Bar Terminal can be Changed to Horizontal/Vertical

Connection method can be changed flexibly according to the customer's panel structure

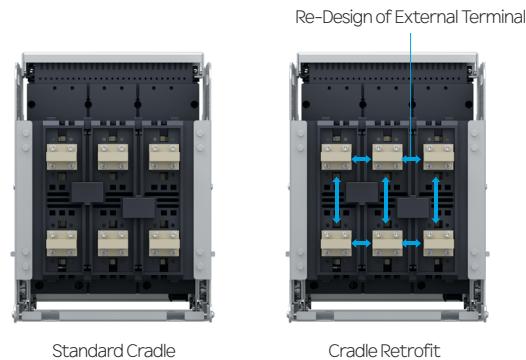

- HGS/HGN A, P frame 630 ~ 1,600 A
- HGS/HGN B, Q frame 630 ~ 3,200 A

#### Convenient Maintenance by Attaching Draw-In/Out Device to the Body

#### Customized Retrofit ACB

New products can be developed to be compatible/installed according to the distance of cradle phase/pole/land and terminal size of the ACB that has been installed previously

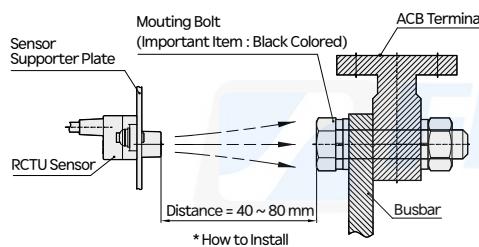

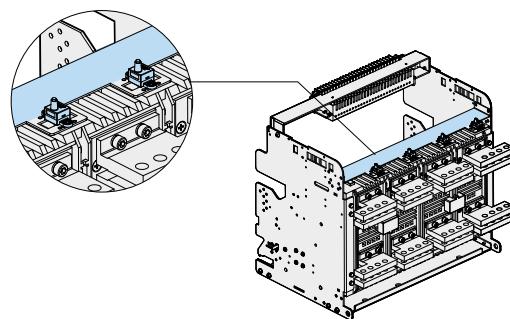

- Economic : No need for busbar and external box replacement, minimum construction period, uninterruptable replacement in case of body retrofit
- Stability : Lifespan can be extended through the latest relay performance and by providing breaking performance of high breaking product
- Compatibility : Stable usage through control terminal bar, bus bar structure and plug-in compatible devices
- Technical Support : Customer satisfaction through inspection of various accessories of old panels

### Equipped with Temperature Sensor

Reliable high temperature measurement is possible following the sensor measurement of the heat source (Range of measurement : -5 ~ 250 degrees)

#### Example of IR Sensor Application

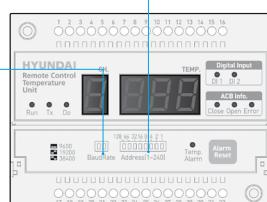

Address Setting : 1 ~ 240

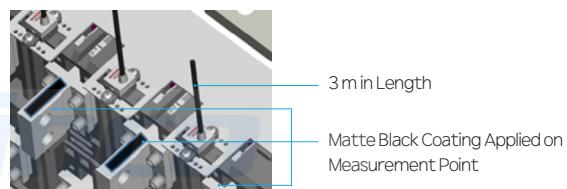

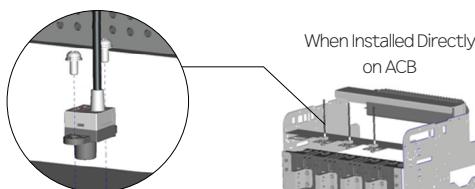

On	<input type="checkbox"/>						
1	2	3	4	5	6	7	8

Baud Rate Setting

On	Set	Description
<input type="checkbox"/>	Off	9,600
<input type="checkbox"/>	On	19,200
<input checked="" type="checkbox"/>	Off	38,400

#### Installation of IR Sensor

- IR temperature sensor has to be installed with sufficient insulation distance from the point to be measured
- The recommended distance between the measurement point and temperature sensor is 50 ~ 80 mm.
- The measurement point has to be a surface without reflection due to the characteristics of the IR sensor and matte black painting is recommended for the measurement point.

#### Caution

- The measurement value of the IR sensor differs depending on the reflection rate of the metal surface. Surfaces coated with matte black or surface with varnish excluding metallic varnish must be measured.
- The size of measurement point differs depending on the D : S Ratio for the surface to be measured and the IR distance. This sensor has a ratio of 8 : 1.

### Applied Standards and Certifications

HG Series air circuit breaker has acquired testing/certifications from IEC 60947-1, 2 certified testing institute and can be installed and applied according to the usage environment and conditions permitted by the standards.

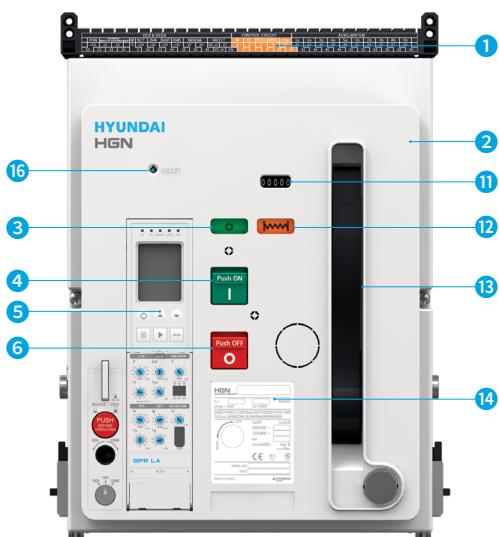

### Acquired Standards and Certifications

- KS Certification : KSC 4620
- CB Certification (DEKRA, KERI) : IEC 60947-1, 2
- CE Mark
- CCC Certification
- Vessel Certification : LR, ABS, KR, BV, GL, NK, RINA, DNV, RS
- 9 Major Vessel Certifications : KR, GL, LR, ABS, BV, NK, RINA, DNV, RS

⑤ Com. Signal LED	⑫ Menu Button	⑲ PTA Operational Time Setting	㉖ Battery
⑥ LCD/NFC Antenna (LN, SN)	⑬ LTD Pick Up Setting	⑳ GFT/ELT Pick Up Setting	
⑦ STD/INST Test Button	⑭ LTD Operational Time Setting	㉑ GFT/ELT Operational Time Setting	

※ Self-power functions normally in the case of 10 % for 3 phases and 30 % for a single phase. However, when 200A, 320A, 400A CT is used, it functions normally in case of 50 % for 3 phase and more than 100 % for single phase.

When using MCR function, mark B8 in the name of order type. Auxiliary contact point is 4a5b.

The lifespan of the battery is usually 10 years so in case it is time for replacement, contact our customer support division and services can be received at a cost.

High/low test function is automatically disabled when a load current is applied.

## Enhancement of Over Current Relay (OCR) Functions

Over current relay (OCR) built in the HG Series air circuit breaker has reinforced power monitoring functions such as temperature monitoring, fault recording other than the basic protection function, ultimately enabling stable power supply.

## Appearance and Setting Value

### GPR-LN (50, 60)

- Overload Protection
  - Long time delay
- Short Circuit Protection
  - Short time delay, instantaneous trip
  - I<sup>2</sup>t On/Off optional (for STD)
- Ground Fault Protection
  - I<sup>2</sup>t On/Off optional
- Neutral Wire Protection
  - 3P : No protection for neutral wire
  - 4P : 100 % × In
  - LTD, STD, INST protection
- Self-Power
- Equipped with NFC Functions
  - Incident information can be received to the mobile phone
  - Introduction of function and app installation method : Refer to Page 34

### Protection Features

## Protection Functions

LTD Protection	Current Setting (A)	$I_n = I_{ct} \times \dots$	0.5	0.63	0.7	0.8	0.9	1

## Accessories

### Over Current Relay (OCR)

#### Appearance and Setting Value

GPR-LA (51, 61)

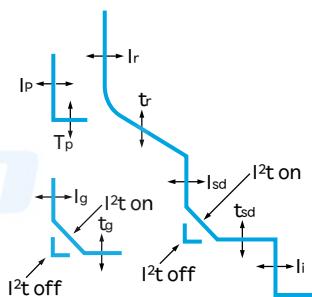

- Overload Protection
  - Long time delay
- Short Circuit Protection
  - Short time delay, instantaneous trip
  - $I^2t$  On/Off optional (for STD)
- Ground Fault Protection
  - $I^2t$  On/Off optional
- Neutral Wire Protection
  - 3 Pole : No protection
  - 4 Pole : Non, 50%, 100% ( $\times I_r, I_{sd}, I_i$ )
- Measurement and Display
  - 3 Phase current
- Realization of Protective Coordination by ZSI (Zone Selective Interlocking)
- Fault Recording
  - Records up to 256 fault information on fault type, fault phase, fault value, occurrence time of fault
- Event Recording
  - Records up to 200 events of devices, records changes in protection trip relay information
- Pre-Trip Alarm
  - Prevent unnecessary overload trip by setting according to rated current ( $I_n$ )
- Field Test
  - Simulation of long time, short time, instantaneous

- RS-485 Communication/Modbus-RTU
- 4a DO (Digital Output)
  - Contact specification

Rating	Nominal Switching Capacity (Resistive Load)	5 A 277 VAC
	Max. Switching Power (Resistive Load)	1,385 VA
	Max. Switching Voltage	277 VAC
	Max. Switching Current	5 A
	Max. Switching Capacity (Reference Value)	100 mA 5 VDC

## GPR-LAG (52, 62)

- Overload Protection
  - Long time delay
  - Thermal operation
- Short Circuit Protection
  - Short time delay, instantaneous trip
  - I<sup>2</sup>t On/Off optional (for STD)
- Earth Leakage Protection
  - Uses ZCT for 5 A output at secondary (used within 3 %)
  - GPR setting is calculated based on 5 A at secondary
    - Ex) When using 100 : 5 A, in order for primary to function at 30 A,  $30 \times 5 / 100 = 1.5$  A, GPR is set to 2 A
- Neutral Wire Protection
  - 3 Pole : No protection
  - 4 Pole : Non, 50 %, 100 % ( $\times$ lr, lsd, li)
- Measurement and Display
  - 3 Phase current
- Realization of Protective Coordination by ZSI (Zone Selective Interlocking)
- Fault Recording
  - Records up to 256 fault information on fault type, fault phase, fault value, occurrence time of fault
- Event Recording
  - Records up to 200 events of devices, records changes in protection trip relay information
- Pre-Trip Alarm

- Prevent unnecessary overload trip by setting according to rated current (In)

## Accessories

### Over Current Relay (OCR)

#### Operation Characteristics

##### Long Time Delay (LTD)

##### Standard Current Setting

###### • L Type

- The scale marks the magnification of [In].
- The setting range of current is a 10-step method of Non, 0.8, 0.83, 0.85, 0.88, 0.9, 0.93, 0.95, 0.98 and 1.0×[In].
- No protection in case the [Ir] is set as [Non].
- The breaker does not trip below 105 % of [Ir] and trips at 120 % of [Ir] and above.

###### • S Type

- The setting range of current is a 10-step method of Non, 0.7, 0.8, 0.9, 1.0, 1.05, 1.1, 1.15, 1.2, 1.25×[In].
- The breaker trips at 100 % of [Ir] setting value and above.

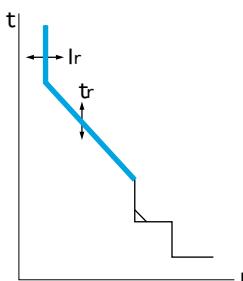

##### Time Delay Setting

###### • L Type

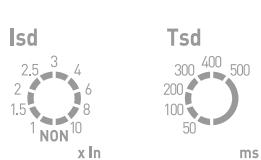

- The scale is the second of operating time based on 600 %×[Ir] with inverse time operation.
- The setting range of current is a 10-step method of 0.5, 1.25, 2, 2.5, 5, 10, 15, 20, 25, 30 sec.
- The breaker trips at ±15 % of setting time.

###### • S Type

- The setting range is a 9-step method of 10, 15, 20, 25, 30, 35, 40, 50, 60 sec.
- The scale is the second of operating time based on 120 %×[Ir] with inverse time operation.

##### Short Time Delay (STD)

##### Standard Current Setting

###### • L Type

- The scale marks the magnification of [In].
- The setting range of current is a 10-step method of Non, 1, 1.5, 2, 2.5, 3, 4, 6, 8, 10×[In].

###### • S Type

- The scale marks the magnification of [In].
- The setting range of current is a 10-step method of Non, 1, 1.5, 2, 2.5, 3, 3.5, 4, 4.5, 5×[In].

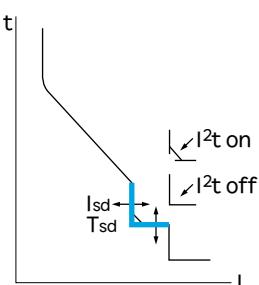

##### Time delay setting

###### • L Type

- The marking indicates the relay operation based on the time of 110 % of [lsd] in msec with definite time operation.
- The setting range is a 6-step method of 50, 100, 200, 300, 400, 500 msec.
- 1,000 % of inverse time curve is applied in case of  $I^2t$  on setting.

###### • S Type

- The marking indicates the relay operation based on the time of 110 % of [lsd] in msec with definite time operation.
- The setting range is a 6-step method of 50, 100, 200, 300, 400, 500 msec.
- 500 % of inverse time curve is applied in case of  $I^2t$  on setting.

### Instantaneous (INST)

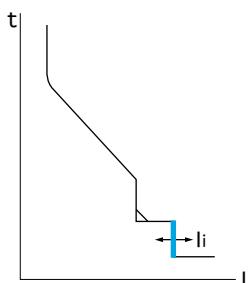

#### Standard Current Setting

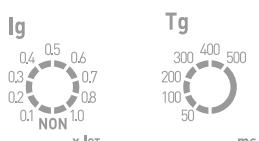

- The scale marks the magnification of [ $I_n$ ].
- The setting range of current is a 9-step method of Non, 2, 3, 4, 6, 8, 10, 12,  $15 \times [I_n]$ .
- No protection in case [ $I_i$ ] is set as [Non], the protection does not function.

#### Time Delay Setting

- Total breaking time is below 50 ms.

### Ground Fault Trip (GFT)

#### Standard Current Setting

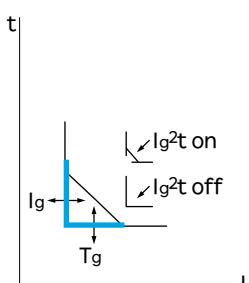

##### • L Type

- The numbers indicate scale for the 1st current of OCR [ $I_{ct}$ ].
- The setting range of current is a 10-step method of Non, 0.1, 0.2, 0.3, 0.4, 0.5, 0.6, 0.7, 0.8,  $1.0 \times [I_{ct}]$ .

#### Time Delay Setting

##### • L Type

- The marking indicates the relay operation based on the time of 120 % of [ $I_g$ ] in msec with definite time operation.
- The setting range is a 6-step method of 50, 100, 200, 300, 400, 500 msec.
- It functions in case of 100 %  $I_{ct}$  of inverse time in case of  $I_g^2 t$  on setting.

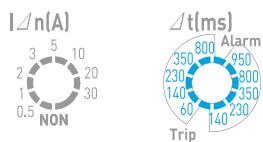

## Accessories

### Over Current Relay (OCR)

#### Operation Characteristics

##### Earth Leakage Trip (ELT)

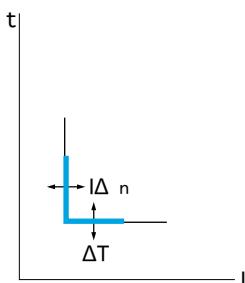

##### Standard Current Setting

###### • GPR LAZ

- The scale marks the magnification of UPR rated primary current [ZCT].
- The setting range of current is a 9-step method of Non, 0.5, 1, 2, 3, 5, 10, 20,  $30 \times [A]$ .

###### • GPR LAG

- The scale is based on 5 A ZCT at secondary.
- The setting range of current is a 7-step method of Non, 0.5, 0.8, 1, 2, 3, 5.

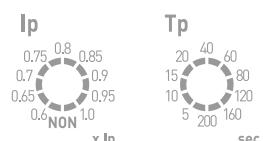

##### Time Delay Setting

###### • L Type

- Once the primary value that has been set flows as much as the delayed time, it is set as both alarm and trip mode.
- The setting range of alarm is a 5-step method of 140, 230, 350, 800, 950 msec.
- The setting range of trip is a 5-step method of 60, 140, 230, 350, 800 msec.

##### Pre-Trip Alram (PTA)

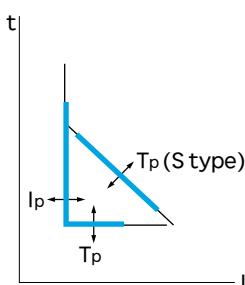

##### Standard Current Setting

###### • L Type

- The scale marks the magnification of  $[In]$  with inverse time operation.
- The setting range of current is a 10-step method of Non, 0.6, 0.65, 0.7, 0.75, 0.8, 0.85, 0.9, 0.95, 1.0 of  $[In]$ .

###### • S Type

- The scale marks the magnification with regards to  $[Io]$  with inverse time operation.
- The setting range of current is a 10-step method of Non, 0.7, 0.75, 0.8, 0.85, 0.9, 0.95, 1.0, 1.05, 1.1× $[Io]$ .

##### Time Delay Setting

###### • L Type

- The marking indicates the relay operation based on the time of 100 % of  $[Ip]$  in sec.
- The setting range of current is a 10-step method of 5, 10, 15, 20, 40, 60, 80, 120, 160, 200 sec.

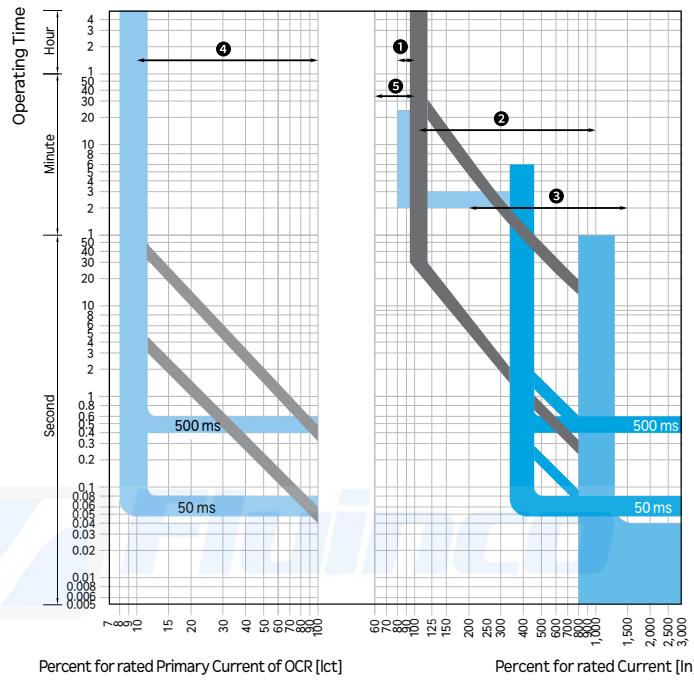

###### • S Type

- 9-step of 1, 5, 10, 15, 20, 25, 30, 35, 40 sec can be selected in 120 % of  $[Ip]$  and has operation characteristics at inverse time operation.

## Characteristic Curve

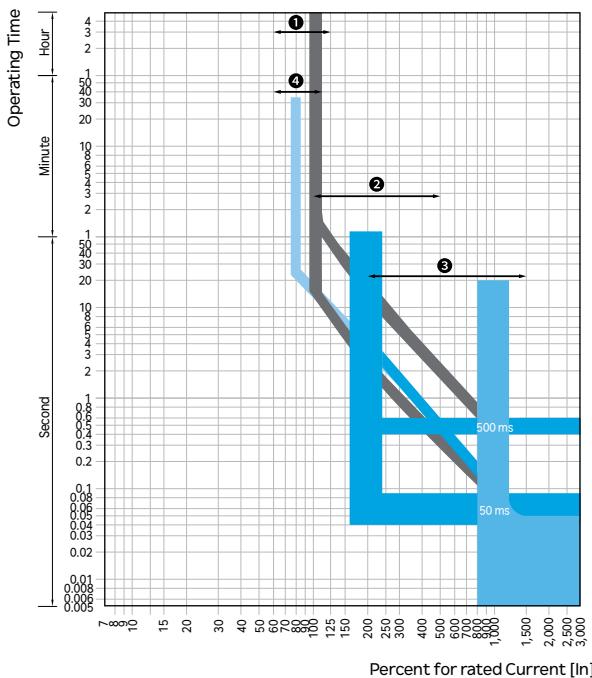

### General Feeder

- ③ Instantaneous Tripping Current Setting Range
- ④ Ground Fault Trip Current Setting Range
- ⑤ Pre-Trip Alarm Current Setting Range

### Generator

- ① Long Time Delay Current Setting Range
- ② Short Time Delay Current Setting Range
- ③ Instantaneous Tripping Current Setting Range
- ④ Pre-Trip Alarm Current Setting Range

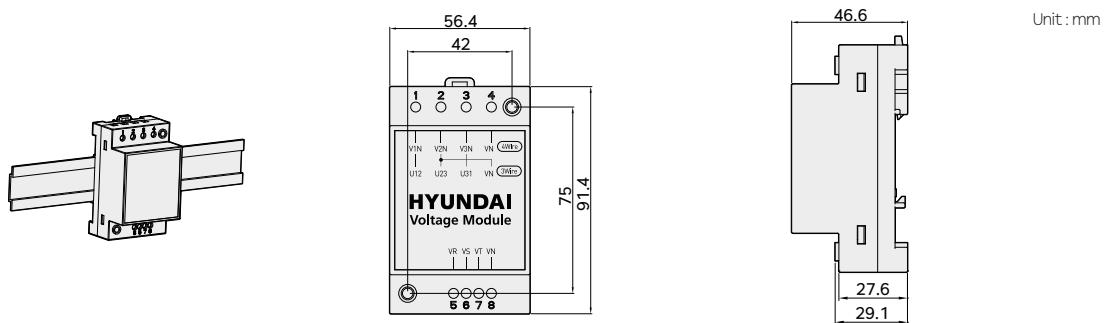

## Accessories

### Over Current Relay (OCR)

#### Measurable

#### Dimension

#### Voltage Module

GPR-LP/LH/SP Trip Relay has to be installed with a voltage module to measure the voltage.

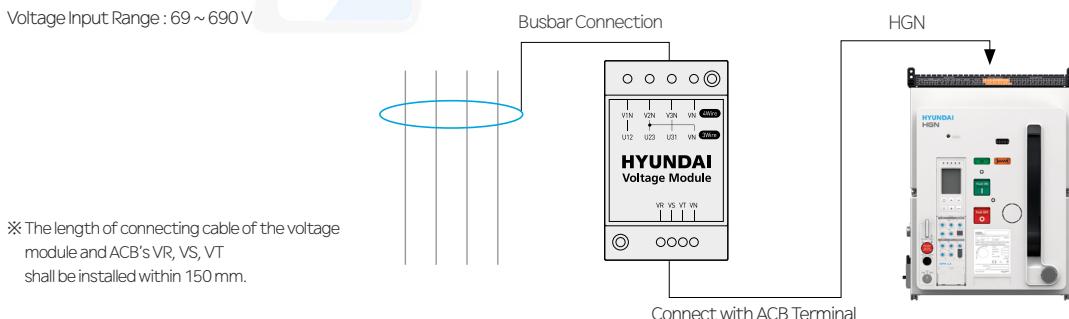

Voltage Input Range : AC 69 ~ 690 V

##### ※ INSTALLATION PRECAUTION

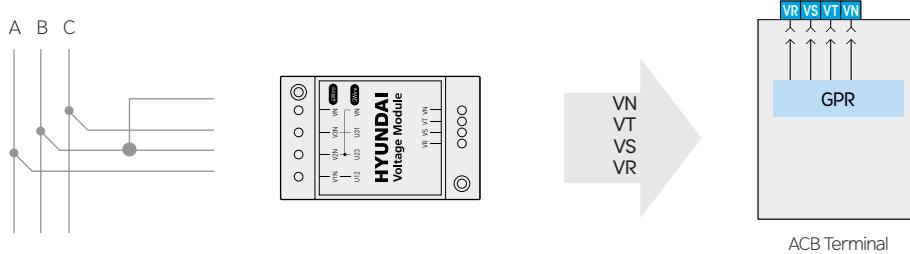

- When installing on a panel, do not install in a place exposed to external shock or vibration.
- Do not install it on the ACB Cradle as it may be damaged by shock from opening and closing.

#### Voltage Connection

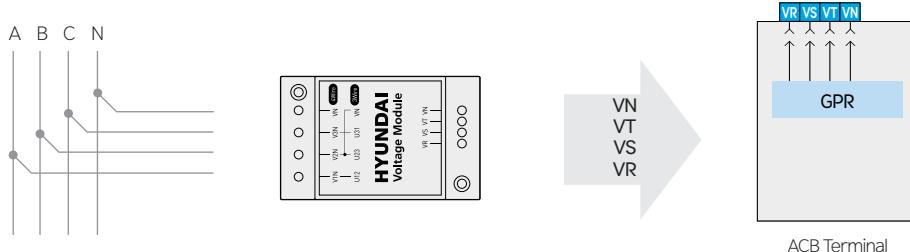

Voltage Input Range : 69 ~ 690 V

#### 3P 3Wire

#### 4P 4Wire / 3P 4Wire

### Zone Selective Interlocking System

Zone selective interlocking function involves the breaker in the fault sector detecting malfunction for selective protection coordination. The circuit breaker in the fault sector sends a lock signal to the back-up protection circuit breaker by force to delay the operation and the circuit breaker in the fault sector operates instantaneously to enable selective protection coordination of the system.

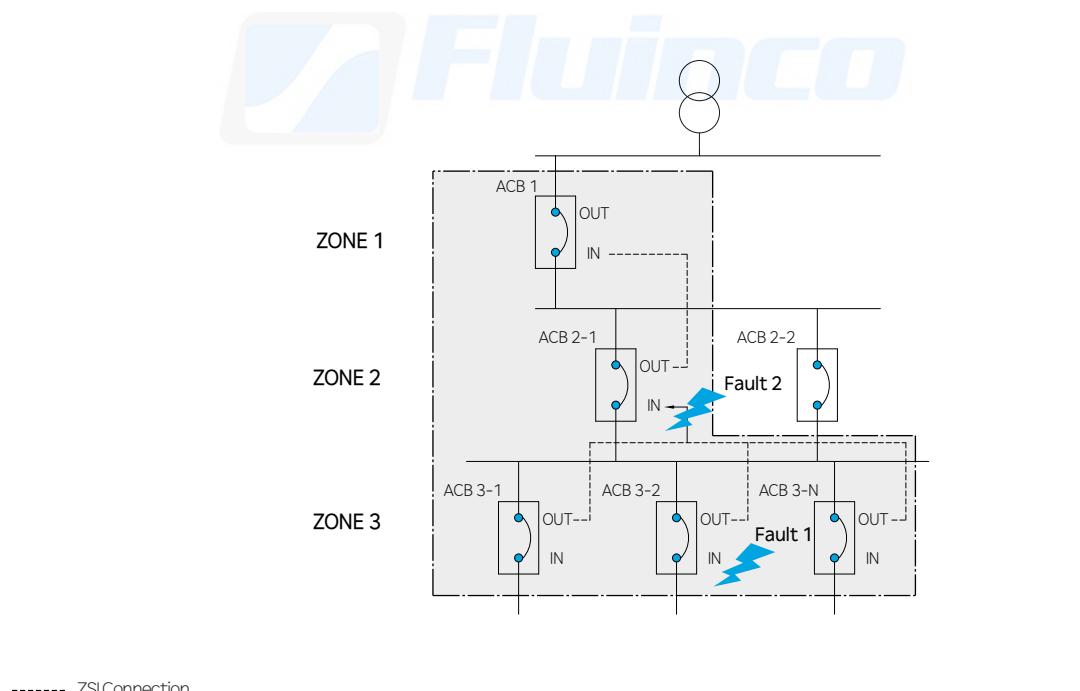

#### Examples

- First Fault Occurrence

In case fault 1 occurs in selective zone (Zone 3), ACB 3-2 functions immediately and ACB 3-2 relay triggers a ZSI signal in ACB 2-1 relay to maintain a delay so that the circuit breaker does not function, preventing the expansion of fault region.

- Fault 2 Occurrence

In case a fault occurs at the lower end of ACB 2-1, the circuit breaker in zone 3 region is unable to detect. Therefore, the relay of ACB 2-1 is unable to receive any signal from the lower end so, immediately, ACB 2-1 functions, triggering a ZSI signal to ACB 1 to prevent the expansion of fault range.

※ ZSI connection wire's maximum distance has to be constituted within 3m.

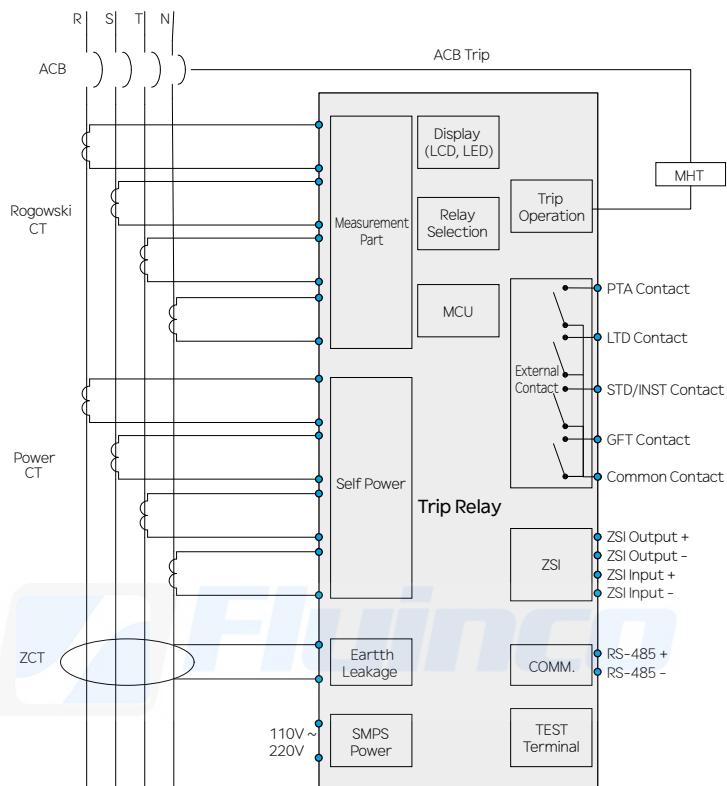

ZSI function cannot be operated during self-power.

Upon the release of the product, ZSI function is not activated and the 2 terminals (31, 32) at the control power input area are short so please cut the wire before connection when using ZSI.

## Accessories

### Over Current Relay (OCR)

#### System Diagram

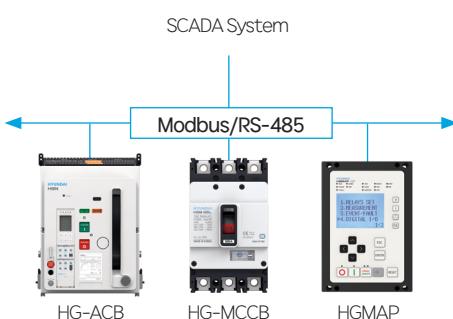

#### Communication Function

##### Modbus-RTU/RS-485

- Operation Mode : Differential
- Distance : Max. 1.2 km
- Cable : RS-485 Shielded Twist 2-Pair Cable
- Baud Rate : 9,600, 19,200, 38,400 bps
- Transmission Method : Half-Duplex
- Termination :  $110\Omega$

##### NFC Communication (Near Field Communication) \* for Android™

- Various information related to the breaker's faults (cause of fault, current waveform at fault etc.) can be received conveniently through smart phones by using NFC wireless communication technology's Android application.
- Execute the application and receive the fault information by placing the smart phone's NFC antenna at the contact position indicated in the OCR.
- You can search the HG CB Link in Google Play™ for the application or download it for free by connecting to the QR code on the right.
- Up to 10 past faults worth of information is saved.  
(However, as for current's waveform information, only the recent fault is saved.)
- The information received can be sent to the e-mail through the application.

## Accessories

### Spring Charging Geared Motor

- Manual charging method and geared motor charging method using external power source for charging the spring in the circuit breaker.
- As for the geared motor charging method, if power is applied to the control power terminal number (1), (2), spring charge is possible at 85 ~ 110 % power of the operating voltage range.
- Add M1 ~ M9 in the order form.
- It can be purchased separately.

#### Ordering Method

Name of Accessory	Order Name Placed upon Outgoing	Detailed Specification
Spring Charging Geared Motor	M1	AC/DC 110 V
	M2	AC/DC 220 V
	M7	DC 24 V
	M8	DC 48 V
	M9	DC 125 V

#### Ratings

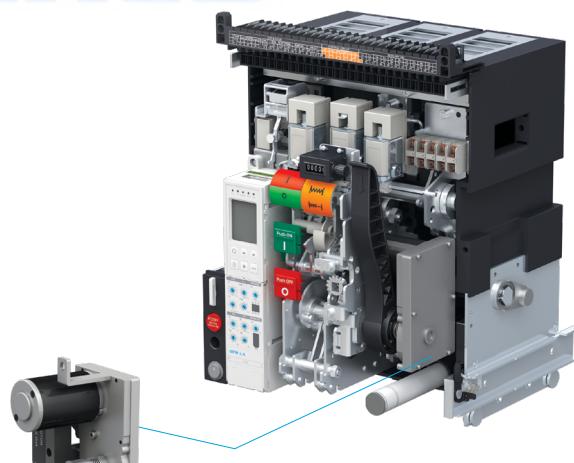

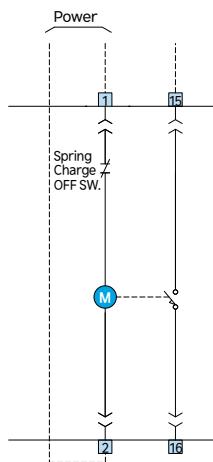

Item	DC 110	DC 220
Rated Current (A)	1.2	0.5
Starting Pick-Up (A)	5 ~ 6 times the rated current	
Final Rated rpm	16 ± 3	
Charging Time (sec)	Within 5 seconds <sup>1)</sup>	
Rated Torque (kgf)	300 kgf×cm	
Rated Watt (W)	100	100
Dielectric Strength (V/min)	2,000	
Insulation Resistance (MΩ)	100	
Workable Temperature (°C)	-15 ~ 60	

※ 1) Charging time is within 10 sec of rated, in case of DC 24/48 V.

Geared Motor

### Spring Charging Switch or Ready to Close Switch

- Spring charging switch delivers (15, 16) the charged status when mechanism spring charge is complete.
- Read to close switch delivers (15, 16) only when the circuit breaker is open and simultaneously only when the mechanism spring charge is complete.
- Order name of spring charging switch : B6, Order name of ready to close switch : BT
- Two accessories cannot be ordered simultaneously.

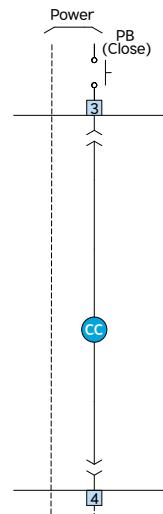

## Closing Coil (CC)

- A control device which closes a circuit breaker remotely from outside.
- The circuit breaker is closed by applying power of at least more than 150 ms within the range of 85 ~ 110 % of the rated control voltage to the control power terminal number (3) and (4).
- Add C1 ~ C9 in the order form when ordering the main unit.
- It can be purchased separately.
- Use a separate switch externally to apply power to the closing coil.

### Ordering Method

Name of Accessory	Order Name Placed upon Outgoing	Detailed Specification
Closing Coil	C1	AC/DC 110 V
	C2	AC/DC 220 V
	C3	AC 380 V
	C4	AC 440 V
	C7	DC 24 V
	C8	DC 48 V

Closing Coil

## Accessories

### Trip Coil (TC)

- A control device which trips a circuit breaker remotely.
- The circuit breaker is tripped by applying power of at least more than 150 ms within the range of 70 ~ 110 % of the rated control voltage to the control power terminal number (7) and (8).
- Add S1 ~ S9 in the order form when ordering the main unit.
- It can be purchased separately.
- Use a separate switch externally to apply power to the closing coil.

#### Ordering Method

Name of Accessory	Order Name Placed upon Outgoing	Detailed Specification
Trip Coil	S1	AC/DC 110 V

## Secondary Trip Coil

- It is a control device which trips a circuit breaker remotely from outside and dual remote trip is possible with an additional installation of trip coil.
- The circuit breaker is tripped by applying power of at least more than 150 ms within the range of 70 ~ 110 % of the rated control voltage by applying power to the control power terminal number (9) and (10).
- When dual trip coil is used, it cannot be used together with UVT coil.
- Add S1 ~ S9 in the order form when ordering the main unit and under the option, add S1 ~ S9 once again.
- It can be purchased separately.
- Use a separate switch externally to apply power to the dual trip coil.

Secondary Trip Coil

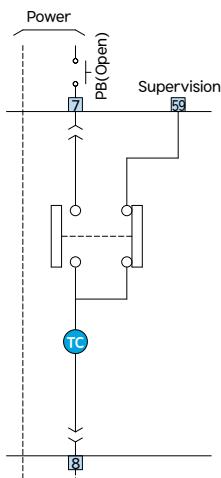

## Accessories

### Trip Coil Supervision

- A control device which trips a circuit breaker remotely from outside.
- The circuit breaker is tripped by applying power of at least more than 150 ms within the range of 70 ~ 110 % of the rated control voltage by applying power to the control power terminal number (7) and (8).
- When using trip coil supervision, auxiliary contact is 4a3b and when 1a1b is added, it becomes 5a4b. (AUX S/W 43/44, 53/54 cannot be used.)
- In order to monitor the permanent normal status when TCS is closed and tripped, the circuit sequence cannot be created by using the additional 1a1b (Order code AA). (Possibility of contact damage) However, if it is compulsory, select 1a contact within 4a3b for use.
- The trip coil's monitoring output contact No. 59.
- Coil supervision checks not only the circuit's mechanical contact but also the condition of the coil.
- Add T1 ~ T9 in the order form when ordering the main unit.
- It can be purchased separately.

Trip Coil Supervision

## UVT Coil

- Under-voltage trip device is a device that automatically trips the circuit breaker if the load voltage drops to below the standard or to prevent accidents at the load part during a black out.
- Under-voltage trip device is classified into instantaneous and time delay type for use. As for instantaneous type, directly connect to control power terminal number (9), (10) for use and as for time delay type, the Time Delay Controller can be used.
- When instantaneous type of UVT is used, dual trip coil cannot be used.
- When instantaneous type of UVT is used, add U1 ~ U9 in the order form when ordering the main unit.
- It can be purchased separately.

UVT Coil

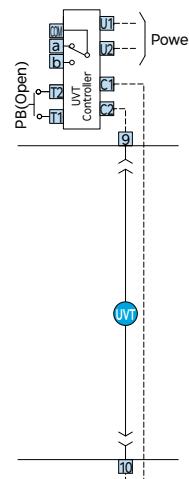

## Accessories

### UVT Time Delay Controller

- Under-voltage trip device is a device that automatically trips the circuit breaker if the load voltage drops to below operating voltage or to prevent accidents at the load part during a black out.
  - This device is capable of delaying (0.5, 1.0, 1.5, 3 sec).
  - UVT Time Delay Controller can be mounted at the left side of the cradle and the external rail and it can also be mounted at the position desired by the customer.
  - Add V1 ~ V9 in the order form when ordering the main unit. Time Delay Controller will be included in the package.
  - When purchasing the UVT time delay controller only, place the order for the separate product, HGNS UT1 ~ UT9.
  - DC 24 V and DC 48 V are only available in instantaneous type.
  - In the event the UVT Time Delay Controller and RCTU are purchased simultaneously, the front mounting can be installed in the front for 1 option designated by the customer.
- The remaining 1 shall be installed by designating a position in the DIN RAIL inside the panel.

#### Dimension

Unit : mm

※ 5, 7, 9 switch status is the status when UVT is functioning.

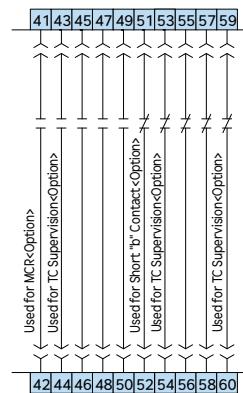

## AUX Switch

- It is an output contact to remotely monitor the On/Off state of the ACB.
- As for HGS Type, 3a3b is provided and as for HGN Type, 5a5b is provided as standard without separate indication in the order form.
- AUX switch can be expanded up to 6a6b maximum.
  - How to order HGS 5a5b : Add A5 in the order form.
  - How to order HGS/HGN 6a6b : Add AA in the order form.
- When using the monitoring contact for trip coil, 3a3b can be used for the AUX switch and when using the MCR function of OCR, it can be used as 4a3b.
- When short "b" is added, it will be attached to 'b' contacts 51, 52 for outgoing and upon additional mounting, the short "b" sealed and released can be mounted additionally depending on the number of b contacts.
- 5a5b can be purchased separately. Place an order separately as HGNS A5.

### AUX Switch Ratings

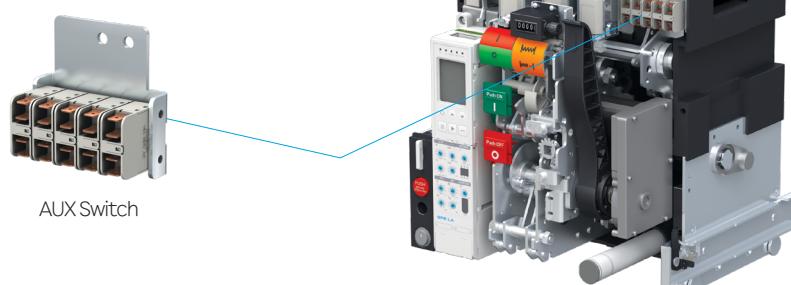

Applicable Load	Resistance	Lamp	Inductor	Motor
AC 125 V	5 A	0.7 A	4 A	1.3 A
AC 250 V	5 A	0.5 A	4 A	0.8 A
DC 125V	≤ 2 A	-	≤ 1.0 A	-
DC 250V	≤ 1 A	-	≤ 0.5 A	-

## Accessories

### Counter

- It is a device that displays the number of operations, indicating On/Off operation of the circuit breaker in 1 cycle.
- It is a primary component so separate order is unnecessary.

### OCR Manual/Auto Reset & Alarm Switch Reset

- It is a device that interlocks the closing of the circuit breaker until the electric line is restored after the user has completely removed the fault factor when a circuit breaker tripped by OCR due to overload or fault current in the electric line. (BR)
- BR : When the circuit breaker functions due to OCR, it interlocks to prevent closing of circuit breaker and is reset manually.
- BA : When the circuit breaker functions due to OCR, the circuit breaker's status is indicated as output contact 1a1b other than the interlock feature and this output contact is reset manually.
- BH : When the circuit breaker functions due to OCR, the circuit breaker's status is indicated as output contact high capacity switch other than the interlock feature and this output contact is reset manually.
- As a product mounted in the main unit, add BR/BA/BH in the order form when ordering the main unit.

### Ordering Method

Name of Accessory	Order Name Placed upon Outgoing	Detailed Specification
OCR Manual Reset	BR	Interlock Manual Reset
OCR Manual Reset + Alarm S/W Reset	BA	Interlock Manual Reset + Alarm S/W Reset
OCR Manual Reset + High Capacity Alarm S/W Reset (1C)	BH	Interlock Manual Reset + Alarm S/W Reset (High Capacity DC 3 A)

## Position Switch

- This switch, mounted at the side of the cradle, displays the position of ACB during draw-out.
- The position of Inserted/Isolated/Test/Connected can be displayed.
- Only one switch is applicable and it can only be mounted at the right side of the cradle.
- It can be purchased separately.

### AUX Switch Ratings

Applicable Load	Resistance	Lamp	Inductor	Motor
AC 125 V	10 A	1.5 A	6 A	2 A

Right Side of Cradle

※ For position switches, because they are common parts with the U-Series product, the position switch may be marked "UANS".

### Operating Sequence of Position Switch Operation Circuit

### Connection Diagram

### Dimension

## Accessories

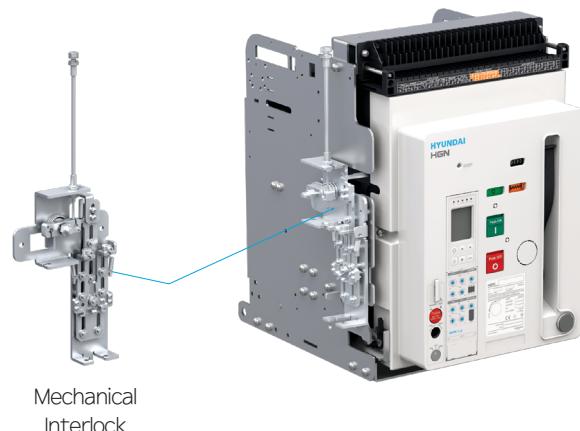

### Lifting Lug

- It is a component that is used for transporting the circuit breaker.
- It can be hung to the handle at the side of the cradle, side of the arc shield and the main unit and the product can be moved by a crane or a person.
- When handling all the products, use the crane and in case of transporting independently using only the crane in case of products below 3,200 A, the products must be transported in accordance with the safety regulations.
- As a product sold separately, place an order for HGNS AL.

## Mechanical Interlock

- MI is a device that mechanically interlocks the closing and tripping of each circuit breaker by connecting 2 or 3 circuit breakers.
- The MI is operated by a combination of the MI unit and the components of the interlock that is installed inside the main unit.
- The MI unit is a separate product and it is a device that is mounted additionally after the ACB has to be installed in the panel.
- When placing the order for the main unit, add B0 in the order from and only the component inside the interlock is mounted inside the main unit for release and as for the external mounting kit, place an additional order as a separate product.
- MI wire should be connected under 2 m between ACBs.
- In order to install, a square hole of 100×200 (mm) is required.

## Accessories

### Door Interlock [DI]

- The device that prevents the switchboard door from opening when the ACB is in the "ON" state at the "Connection" position.
- The DI operates through a combination of the DI Unit and interlock components inside the main body.
- When ordering the main unit with D0, only the interlock internal components will be attached. The external attachment kit must be ordered separately.
- For installation and maintenance, please refer to the installation manual.

Installation on the left side  
of the ACB cradle

Installation on the right side  
of the switchboard.

### Ordering Method

	HGNS FDIBD	Fixed type external attachment Kit + B, D, Q Frame internal interlock components(D0)

## Key Lock

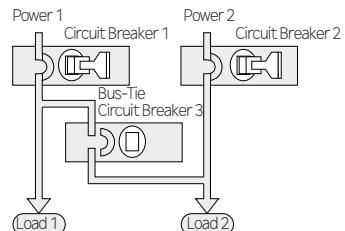

- It is a device that maintains the interlock condition to prevent electric/manual closing when the circuit breaker is open.
- When the key has been used to unlock, the electric/manual On/Off operation is possible. When the key has been removed from the circuit breaker, it becomes interlocked. When the key has been used to lock, the Off button has to be pressed to turn the key to the lock position.
- As a product mounted on the main unit, add AB in the order form when placing an order for the main unit.

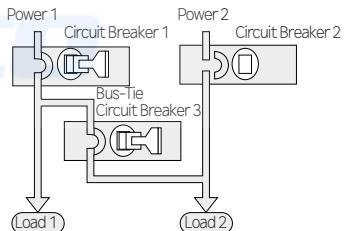

## Key Lock & Key Interlock

- 3 circuit breakers mounted with the key lock device for preventing On can be used to make up the system. Only 2 circuit breakers can be allowed to close using 2 keys and the remaining 1 unit can be interlocked to provide stable load.

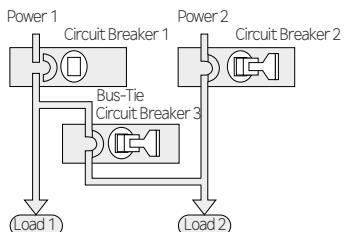

Circuit Breaker 3 cannot be closed

Circuit Breaker 2 cannot be closed

Circuit Breaker 1 cannot be closed

※ Example : Parallel feed at 2 power is prevented in case bus-tie circuit breaker is used

## Accessories

### On/Off Button Lock

- It is a safety device that prevents manual On/Off operation caused by the user's mistaken. The buttons are covered with a plastic cover to prevent arbitrary operation of manual close/trip button and padlock is used.
- As a product mounted on the main unit, add AM in the order form when placing an order for the main unit.
- Padlock is not provided by our company. ( $\varnothing 5 \sim \varnothing 8$ )

On/Off Button Lock

### DR Device Unit & Position Pad Lock

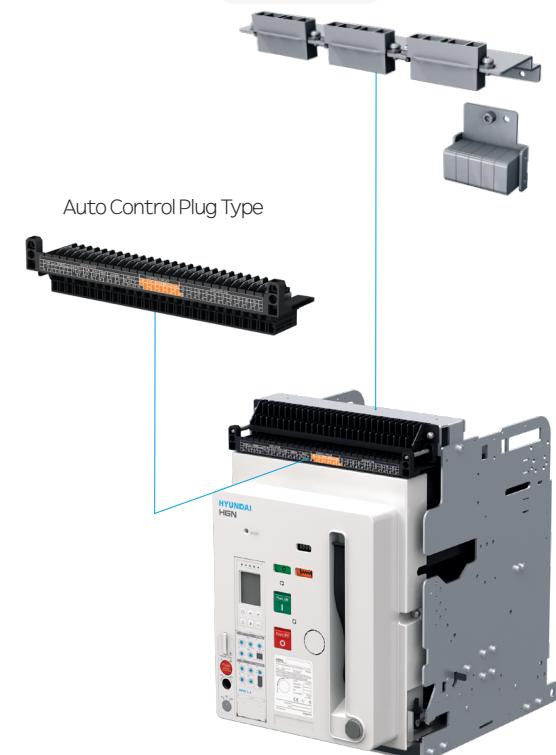

- As for the draw-out type of circuit breaker, DR device is mounted on the main unit.
- DR device is comprised of a groove for inserting draw-out handle, draw-out push button, position indicator and a padlock device.
- As for the padlock device, it is provided as a standard safety device that prevents arbitrary draw-out by using a padlock in the connection/test/isolated position but the padlock is not provided by our company. ( $\varnothing 5 \sim \varnothing 8$ )
- It can be purchased separately.

DR Device Unit &amp; Position Pad Lock

## Auto Connection Type & Manual Control Plug Type

- As for the method of connecting the control power, auto connection type in which the control power is automatically connected/isolated when the main unit is drawn out and manual connection type in which the user directly inserts the connector with the control power connected to the main unit are available.
- Fixed type is provided with manual control plug type as standard so that type of connection terminal of the main power can be designated without separate indication.
- When completely removing the manual connection type of product from the cradle, the main unit has to be separated after removing the connector.
- As a product mounted on the cradle, select A for automatic connection type and J for manual connection type.

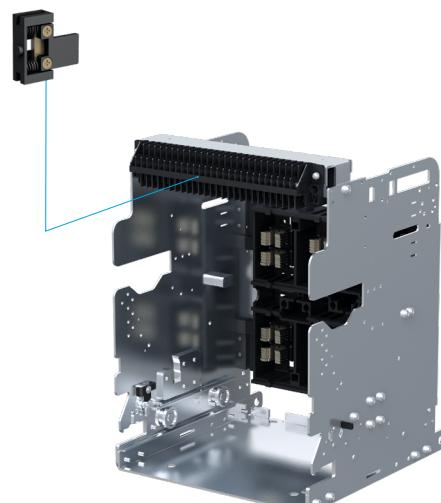

## Short "b" Contact

- When the circuit breaker is moved from the Connected position to the Test position, the auxiliary contact AUX "b" is disconnected to maintain the external control circuit in normal, ultimately maintaining an accurate sequence operation. As for the number of shorting "b" contact, it corresponds to the number of AUX "b" (5b).
- Upon outgoing, only 1b (51, 52) is mounted and as for the remaining 4b, it is sealed together with the manual pack so it can be mounted as much as needed for use.
- As a product mounted on the main unit, add AK in the order form when placing an order for the main unit.

### Indication of Contact Status (When AUX "b" and Short "b" are Connected)

ACB Position	ACB Operating	ACB Close (AUX "b" Off)	ACB Open (AUX "b" On)
Connected Position (Short "b" Off)	AUX "b"  Short "b"	AUX "b"  Short "b"	AUX "b"  Short "b"
Test Position (Short "b" On)	AUX "b"  Short "b"	AUX "b"  Short "b"	AUX "b"  Short "b"

Short "b" Contact

## Accessories

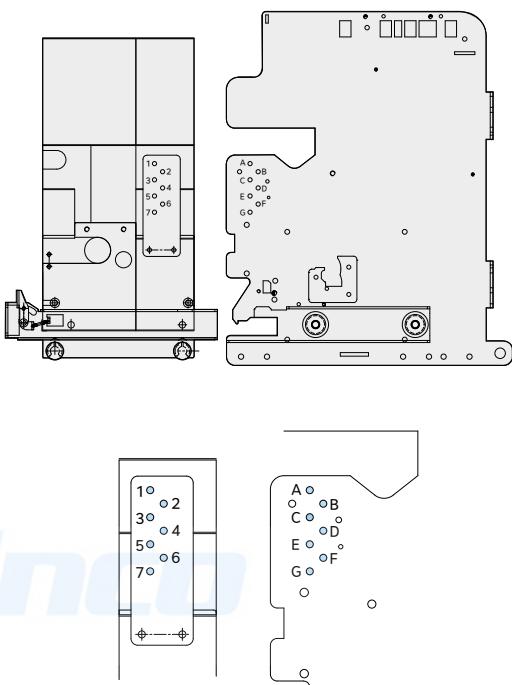

### Miss-Insertion Preventor

- Although the external size is equivalent, in case the rating does not conform when the main unit of the circuit breaker (ACB) is inserted in the cradle in the composition of another circuit breaker, this device prevents it from being inserted.
- It is comprised based on the CT rated current.
- Each component is mounted on the main unit and cradle respectively. Add AW in the main unit and cradle's order form respectively when placing the order.

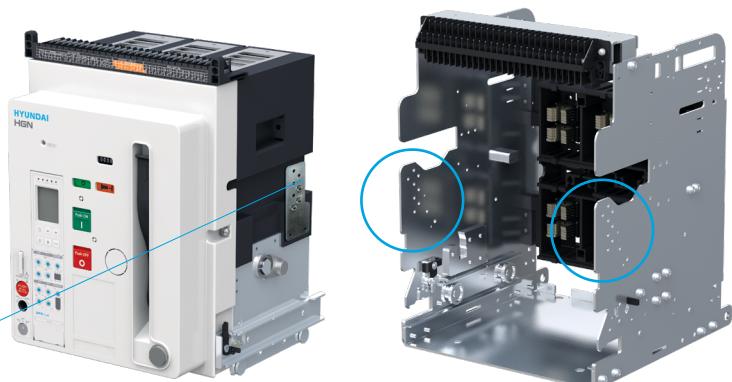

#### Ordering Method

CT Rating	Cradle	ACB
0 = OCR Non Mounting	ADEG	236
O = 200A	ADEF	237
V = 320A	ABEF	347
E = 400A	ABDG	356
T = 630A	ABDF	357
H = 800A	ABDE	367
J = 1,000A	ABCG	456
K = 1,250A	ABCf	457
L = 1,600A	ABCE	467
M = 2,000A	ABCD	567
N = 2,500A	BCDE	167
P = 3,200A	BCDF	157
Q = 4,000A	BCDG	156
S = 5,000A	BCEF	147
X = 6,300A	ABEG	346

#### Part's Mounting Position per Rated Current

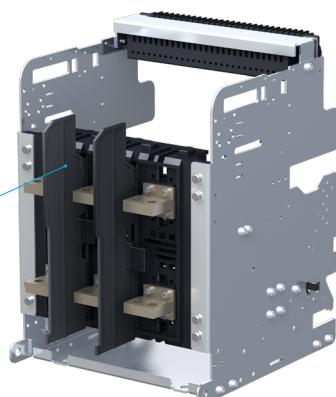

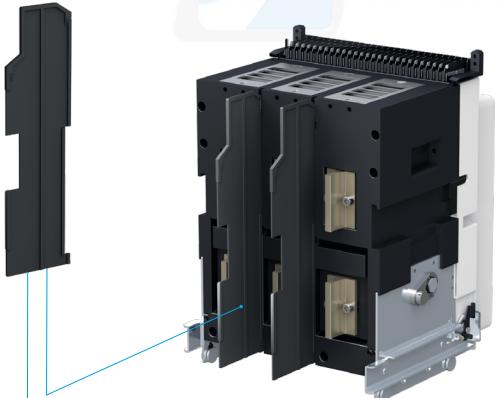

Miss-Insertion Preventer

## Phase Insulation Barrier

- Phase insulation barrier is a part installed between phases that prevents short circuit between phases in advance by closing the arc which may occur between phases.
- 2 ea are mounted for 3P Type and 3 ea are mounted for 4P Type and as they are sold individually, select the required quantity when placing the order.
- As a product sold separately, place an order in HGNS P BAR.

Phase Insulation  
Barrier

A blue line points from the 'Phase Insulation Barrier' caption to the small black component above, and another blue line points from the same caption to the main unit below.

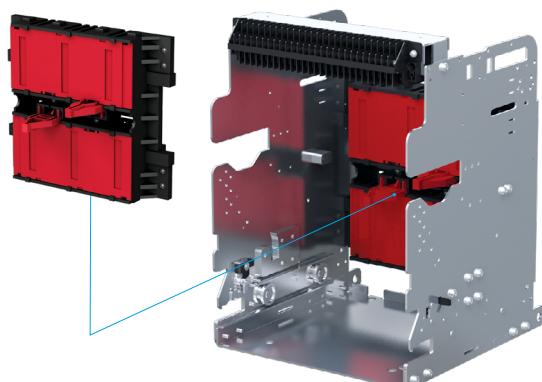

## Safety Shutter & Shutter Lock

- It is a safety device that prevents the contact between the conductor part and the front part when the main unit of the circuit breaker mounted on the cradle is drawn out.
- The structure automatically opens and closes when the circuit breaker is drawn out and it comes with a shutter lock device that prevents it from opening when the shutter is closed in the event the main unit is drawn out. The padlock is not provided by our company. ( $\varnothing 5 \sim \varnothing 8$ )
- As for the shutter, the power side and load side operates separately, each equipped with an operation device and they can be locked individually.
- As a product mounted on the cradle, add AE in the order form when placing the order for the cradle.

### Ordering Method

Name of Accessory	Order Name Placed upon Outgoing	Order Name for Separate Sales (HGNS-)	Detailed Specification
Safety Shutter	AE	HGNS AEA3	A, P Frame, 630 ~ 2,000 A, 3P
		HGNS AEA4	A, P Frame, 630 ~ 2,000 A, 4P
		HGNS AEB3	B, Q Frame, 2,000 ~ 4,000 A, 3P
		HGNS AEB4	B, Q Frame, 2,000 ~ 4,000 A, 4P
		HGNS AEC3	C Frame, 3,200 ~ 5,000 A, 3P
		HGNS AEC4	C Frame, 3,200 ~ 5,000 A, 4P
		HGNS AED3	D Frame, 4,000 ~ 6,300 A, 3P
		HGNS AED4	D Frame, 4,000 ~ 6,300 A, 4P

Safety Shutter &  
Shutter Lock

## Accessories

### Fixing Block

- It is a safety device for reinforcement in order to prevent abnormal operation caused by vibration.
- It is capable of simultaneously fixing the main unit and the cradle and reinforcing the cradles and panel supporters.
- Each component is mounted on the main unit and the cradle. Add AF in the respective order form of the main unit and cradle when placing the order.

### Control Terminal Protection Cover

- It is a safety cover that is placed on the connection terminal to prevent contact with external foreign substances or physical contact after the control power has been connected to the automatic connection type of terminal.
- It cannot be applied to fixed type ACB and draw-out type ACB with manual connection terminal.
- As a product mounted on the cradle, add BC when placing an order for the draw-out type with automatic connection type.

Control Terminal Protection Cover

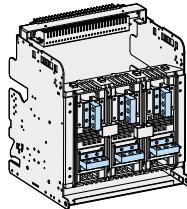

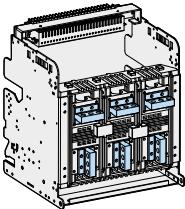

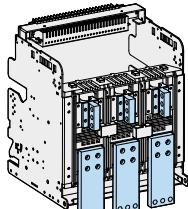

Fixing Block

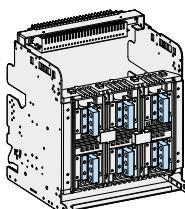

## Terminal Bus Bar (Draw-Out Type)

- HG-Series ACB is compatible with various type of terminal bus bar such as vertical, horizontal, front and others depending on the type of bus bar of the customer's equipment and the terminal can be changed to A, P frame (630 ~ 1,600 A) and B, Q frame (630 ~ 3,200 A).
- The front type of terminal bus bar is released separately from the main unit and cradle so it needs to be installed at site. In addition, the front type of terminal bus bar requires separate order so refer to the following table when placing the order.
- As for the front type of terminal bus bar that is provided separately for the B, Q frame 2,000/2,500 A, 3,200 A terminal is provided.
- Front type of terminal bus bar is sold separately.

Name of Accessory	Order Name for Separate Sales (HGNS-)	Detailed Specification
Connection Terminal (Draw-Out Type)	HGNS HVA3	Up-Down Horizontal Type/Up-Down Vertical Type 6 ea (A, P Frame, 630 ~ 1,600 A, 3P)
	HGNS HVA4	Up-Down Horizontal Type/Up-Down Vertical Type 8 ea (A, P Frame, 630 ~ 1,600 A, 4P)
	HGNS HVB3	Up-Down Horizontal Type/Up-Down Vertical Type 6 ea (B, Q Frame, 2,000 ~ 3,200 A, 3P)
	HGNS HVB4	Up-Down Horizontal Type/Up-Down Vertical Type 8 ea (B, Q Frame, 2,000 ~ 3,200 A, 4P)
	HGNS FRA3	Up-Down Front Type 6 ea (A, P Frame, 630 ~ 1,600 A, 3P)
	HGNS FRA4	Up-Down Front Type 8 ea (A, P Frame, 630 ~ 1,600 A, 4P)
	HGNS FRB3	Up-Down Front Type 6 ea (B, Q Frame, 2,000 ~ 3,200 A, 3P)
	HGNS FRB4	Up-Down Front Type 8 ea (B, Q Frame, 2,000 ~ 3,200 A, 4P)
	HGNS FHVA3	Up-Down Front Type 3 ea + Horizontal Type/Vertical Type 3 ea (A, P Frame, 630 ~ 1,600 A, 3P)
	HGNS FHVA4	Up-Down Front Type 4 ea + Horizontal Type/Vertical Type 4 ea (A, P Frame, 630 ~ 1,600 A, 4P)
	HGNS FHVB3	Up-Down Front Type 3 ea + Horizontal Type/Vertical Type 3 ea (B, Q Frame, 2,000 ~ 3,200 A, 3P)
	HGNS FHVB4	Up-Down Front Type 4 ea + Horizontal Type/Vertical Type 4 ea (B, Q Frame, 2,000 ~ 3,200 A, 4P)

※ The customer-selected type can be purchased separately after the customer modifies the horizontal, vertical, and flat type.

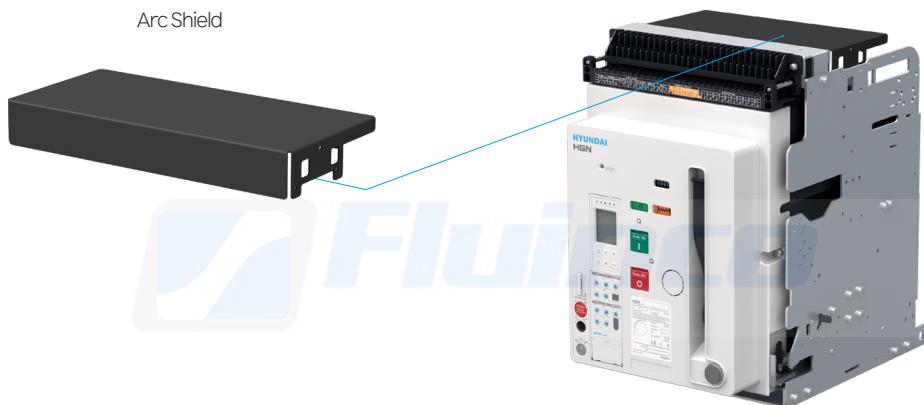

## Accessories

### Arc Shield

- Arc which occurs while breaking the circuit breaker is extinguished through the arc chamber within the main unit or as the residual arc is discharged to the external upper part, the basic distance required for insulation has to be maintained.
- When mounting the arc shield, the insulation distance can be minimized to "0" due to the residual arc discharged to the upper part.
- When mounting the arc shield, it can be piled in 4 stories.
- As a product mounted on the cradle, add AX in the order form when placing the order for the cradle.

#### Ordering Method

Name of Accessory	Order Name Placed upon Outgoing	Order Name for Separate Sales (HGNS-)	Detailed Specification
Arc Shield	AX	HGNS AXA3	A Frame, 630 ~ 2,000 A, 3P
		HGNS AXA4	A Frame, 630 ~ 2,000 A, 4P

\* P, Q Frame Standard Supply

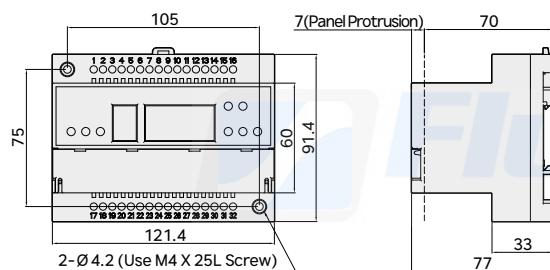

## RCTU

- This product is a module that closes and prevents the ACB remotely by using communication.
- This product uses Modbus/RS-485 communication.
- Close/Open control of ACB assures its reliability through SBO (Select Before Operation) function.
- It can be used together with the temperature monitoring device module.

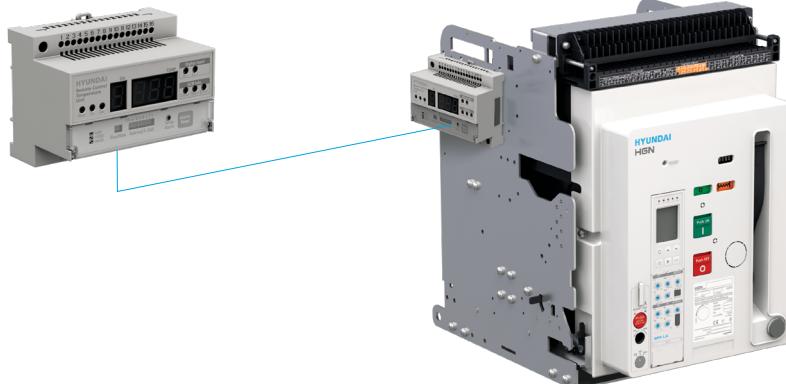

### Contact Specification

For ACB Control	Applicable Range
Contact Ratings	10 A 240 VAC, 30 VDC
Max Switching Power	10 A 240 VAC, 30 VDC

### Dimension

Remote Control Trip Unit (RCU) /  
Temperature Monitoring Device Module

## Temperature Monitoring Device Module

- This product detects the bus bar temperature of the ACB through the temperature sensor installed on the temporary location of ACB and displays it.
- Up to 3 temperature sensor can be installed and it can trigger the designated temperature alarm through a separate temperature contact.
- It supports Modbus/RS-485 communication and the each channel's temperature value and the maximum temperature value out of the channel are transmitted through communication.
- The alarm for operating temperature value can be set through communication.
- The temperature value of each channel can be checked through the Segment LED mounted at the front and once it reaches the temperature alarm set by the user, the temperature value of the relevant channel is displayed.
- As a product sold separately, it can be installed in the ACB and the internal panel. It can also be used together with the remote breaking module.
- This product is an optional product of remote breaking module and it is only sold as a combination type with the remote breaking module.

### Contact Specification

Temperature Alarm	Applicable Range
Contact Ratings	10 A 120 VAC/5 A 240 VAC, 5 A 30 VDC
Max Switching Power	1,200 VA, 150 W

## Accessories

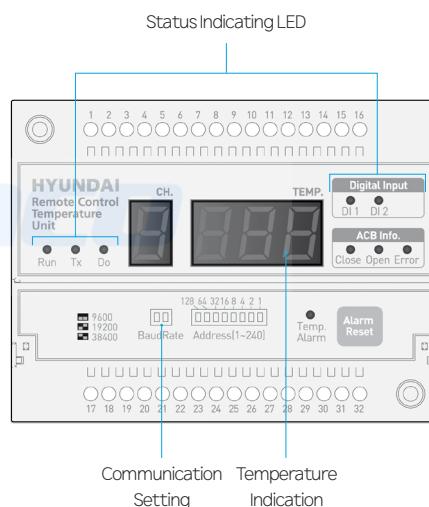

### Temperature Sensor Unit

- Detailed specification of Remote Control Temperature Unit (RCTU)
  - RCTU is equipped with a contact that enables remote insertion/disconnection of ACB using communication. Through the 4 temperature channels, the temperature of ACB is measured.
  - RCTU supports RS-485/Modbus-RTU communication.
  - Insertion/disconnection control of ACB assures its reliability through SBO (Select Before Operation) function.
  - If the temperature rises over the value set by the user through communication, it can be checked through the alarm contacting point (Additional connection required).
  - The temperature of ACB can be checked through the Segment LED at the front.
  - RCTU can be installed in the ACB's cradle or panel.
  - RCU module is equipped with the same function other than the temperature monitoring function in the RCTU module.

Status Indicating LED		Details
RCTU Status	Run LED	RCTU Operation Status LED
	Com LED	Communication LED
	Temp. Alarm LED	Temperature Alarm LED
	Alarm DO LED	Temperature Alarm Output Contact LED
Universal Digital Input	DI1	Dry Contact (5 V)
	DI2	Dry Contact (5 V)
Temperature Alarm	CB Close	ACB Close Status LED
	CB Open	ACB Open Status LED
	CB Error	ACB Close/Open Terminal Non Contacted and Control Error Status

#### Contact Specification

Item	Applicable Range	
ACB Control	Contact Ratings	10 A 240 VAC, 30 VDC
	Max Switching Power	2,400 VA, 300 W
Temperature Alarm	Contact Ratings	10 A 120 VAC/5 A 240 VAC 5 A 30 VDC
	Max Switching Power	1,200 VA, 150 W

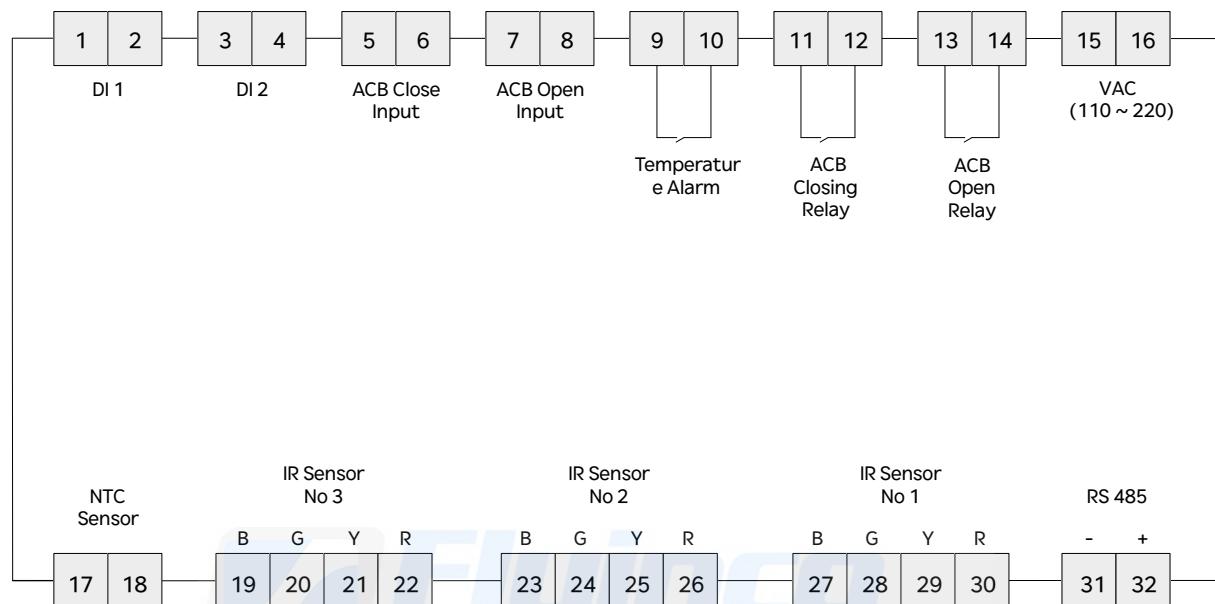

#### Terminal Block

No.	Definition	No.	Definition
1	DI1 +	17	NTC IR Sensor
2	DI1 -	18	NTC IR Sensor
3	DI2 +	19	IR Sensor 3 AOR (Black)
4	DI2 -	20	IR Sensor 3 GND (Green)
5	DI Close +	21	IR Sensor 3 AOT (Yellow)
6	DI Close -	22	IR Sensor 3 Power (Red)
7	DI Open +	23	IR Sensor 2 AOR (Black)
8	DI Open -	25	IR Sensor 2 GND (Green)
9	DO Temp. Alarm	25	IR Sensor 2 AOT (Yellow)

14	DO Open	30	IR Sensor 1 Power (Red)
15	AC Power	31	RS485 (-)
16	AC Power	32	RS485 (+)

#### Caution

- IR sensor differs in value by the reflectivity of metal surface. Measuring point should be varnished or painted with matt black paint depending on material.
- Measuring point and IR distance differ measuring spot size by D : S ratio. This sensor has 8 : 1 scale.
- IR sensor should be indicated at the point where there is no gloss surface.
- IR sensor distance : The ratio of measurement locations is 8 : 1. The diameter measured by the IR sensor is 1 cm when it is 8 cm away from the measurement position.

Block Diagram

## Accessories

### Temperature Sensor

- The temperature sensor is mounted on the designated position as standard but another location can be designated by the user.
- It is sold separately.

#### Ordering Method

Name of Accessory	Order Name for Separate Sales (HGNS-)	Detailed Specification
Remote Control Trip Module	HGNS TSN	Temperature Sensor
	HGNS RCU	Remote Control Trip Module
	HGNS RCTU	Remote Control Trip Module + Temperature Monitoring Device Module
	HGNS RCTUN	Remote Control Trip Module + Temperature Monitoring Device Module + Temperature Sensor

#### Physical Medium

- Shielded Twister Pair cable used

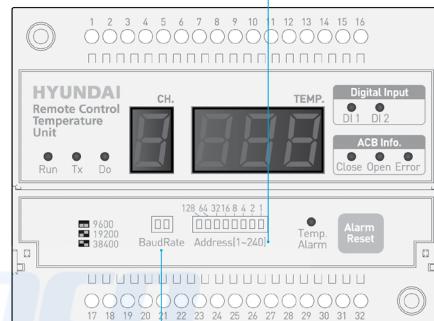

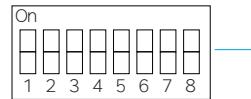

#### Caution

- The use of Shielded Twisted Pair cable is recommended.
- The maximum length for connection can be 1 km but the communication length may become shorter depending on the installation environment and the number of device connected to the communication line.
- The communication length may differ depending on the communication speed.

#### Communication Specification

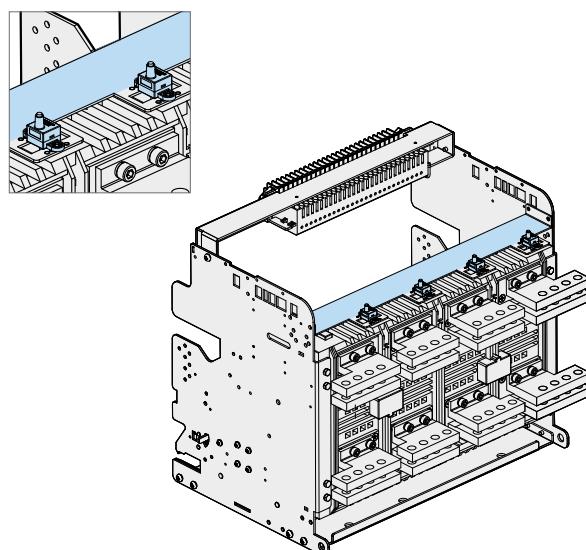

- RS-485 (Modbus-RTU)
- Baud Rate : 9,600, 19,200, 38,400 bps (Default : 9,600)
- Data Bits : 8 bits
- Parity : None
- Stop Bits : 1 bits

Address Setting : 1 ~ 240

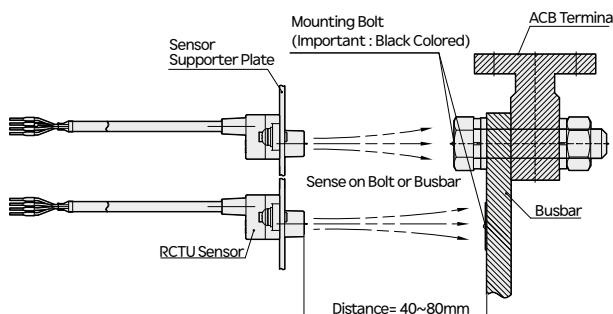

Baud Rate Setting

Set	Description
Off	9,600
Off	19,200
On	38,400

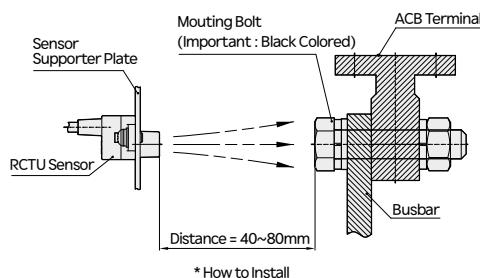

## IR (Infrared Sensor) Specification (Option)

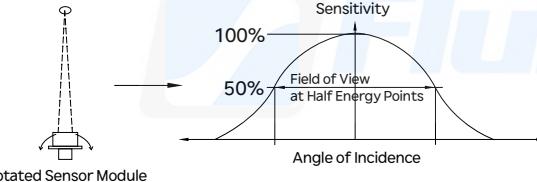

IR Sensor

Example of IR Sensor Application

Pulsed Point Radiation Source

Parameter	Limits			Unit	Conditions
	Min	Typ	Max		
Cable Length		3		m	
Optical Axis	-3.5	0	+3.5	Degree	Sensor View Direction
Field of View		6	11	Degree	50 % Energy Points
D:S Ratio		8:1			Distance (mm) to Spot Size

## IR Sensor Measurement

- IR temperature sensor has to be installed with sufficient insulation distance from the measuring point.
- The recommended distance between the measuring point and the temperature sensor is 50 ~ 80 mm.
- The measuring point must be a surface without reflection due to the characteristics of the IR sensor and black matte painting is recommended at the measuring point.

### ⚠ Caution

1. As for the IR sensor, the measurement value differs depending on the reflection rate of the metal surface. Measuring point with surfaced painted with matte black or varnish other than metallic varnishing must be measured.
2. As for the surface to be measured and the IR distance, the size of measurement area differs depending on the D : S Ratio. This sensor has a ratio of 8 : 1.

## Accessories

### Temperature Sensor

#### Connection Diagram

ACB Information Pin

a Contact	b Contact	Test	Connection

46, 48, 50	56, 58	62	72

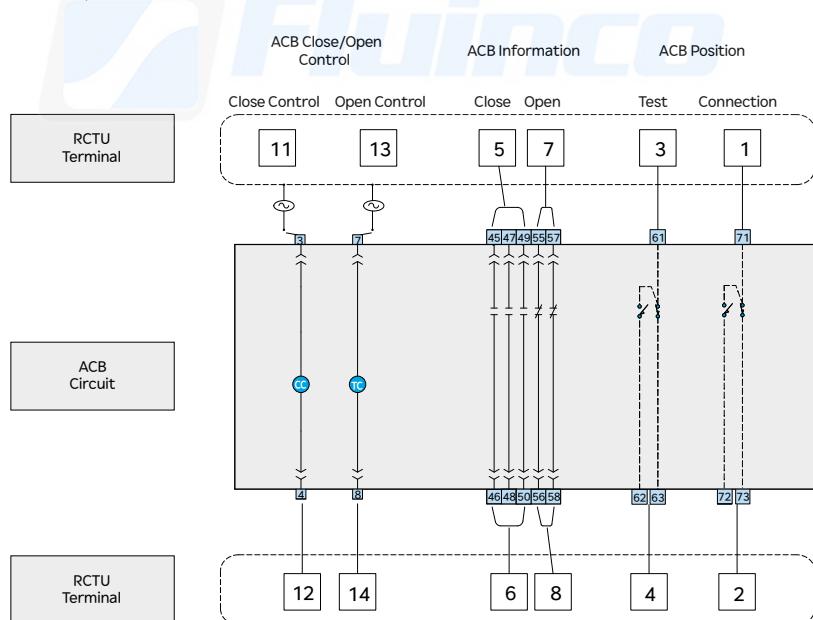

ACB Open/Close Control Pin

CC	TC
3	7
4	8

HGN

Example : When DI input is used as ACB position

#### INTC Thermistor Specification (Option)

- The electrical resistance value changes depending on the ambient temperature and by measuring the change in value, the temperature is displayed.
- The length of the cable is 1,000 mm and it measures the value of ambient temperature where in the RCTU has been installed.
- The range that can be measured is -50 ~ 250 °C.

Parameter	Content	Conditions
Length of Cable	1,000 mm	
Resistance Value	$10 \text{ k}\Omega \pm 1\%$	Ambient Temperature of 25 °C

## OCR Portable Checker

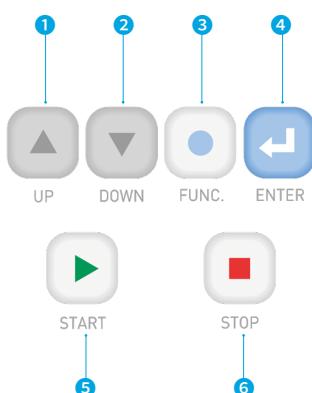

- OCR Portable Checker (Hereinafter referred to as the Checker) executes the relay test operation of the OCR (Hereinafter referred to as the OCR) (Long time/short time delay/instantaneous/ground fault).
- It is possible to set the current size and phases using button for the OCR test.
- The relay test factors can be set through the front LCD and the operating time can be checked.
- It is equipped with a battery so it can be used without a separate external power.
- As for the cable connector of the checker, connect when the control power of OCR is off when inserting the OCR.
- As a product sold separately, place an order for HGNS OCC.
- HGNS OCC is a product with a calibration certificate issued by a specializing institute.

### Ratings

Item	Detailed Specification
External Power (Adaptor)	Input : AC/DC 100 ~ 220 V, 50/60 Hz Output : DC 24 V, 2.5 A
Battery	Alkaline 9 V : 3 ea
Trip Time Measurement	0 ~ 999.999 sec
Test Output	0.3 lct ~ 17 lct
Output Precision	± 20 % (1 lct ~ 17 lct)
Size (mm)	193.40 (H) x 110.60 (W) x 44.60 (D)

## NCT (Neutral CT)

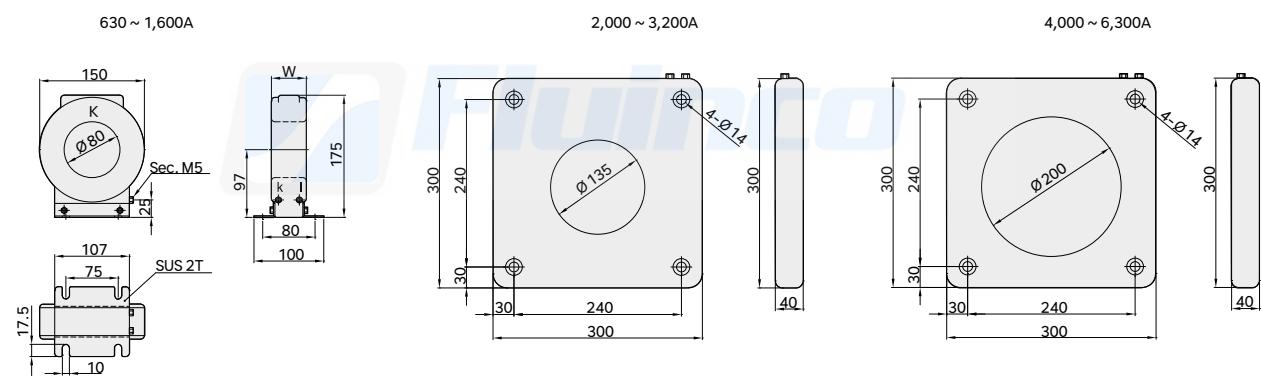

- It is a separate mounting type of current transform installed in the N phase in case of protecting the earth fault by using 3-pole air circuit breaker with earth fault protection features in a 3 phase 4 line circuit. It clarifies the GFT operation caused by earth fault by detecting currents flowing in the N phase.
- The phase is important for inserting the relay so connect properly to the designated terminal.
- As a product sold separately, place the order using the following form name per rated current.
- Switch the OCR's switch from 3P to 4P after connecting the NCT power (k), 30 ( l ) to the 3-pole circuit breaker.

### Externals

#### Ordering Method

## Accessories

### CTD-Condenser Trip Device

- In case of using AC/DC power for trip control of the circuit breaker, it is a device that can electrically trip the circuit breaker once by using the power charged in the CTD when the supply of control voltage has been stopped due to black-out and others.
- It is a product sold separately.

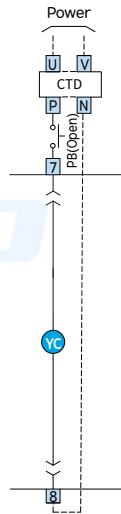

#### Ordering Method

Name of Accessory	Order Name for Separate Sales (HGN-)	Detailed Specification
CTD	HGN CTD1	AC 110 V
	HGN CTD2	AC 220 V

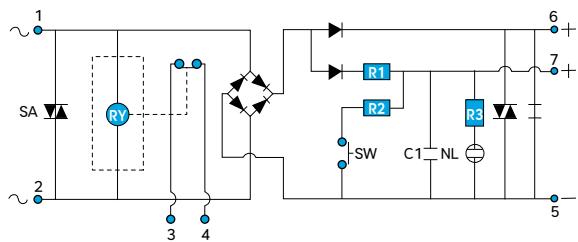

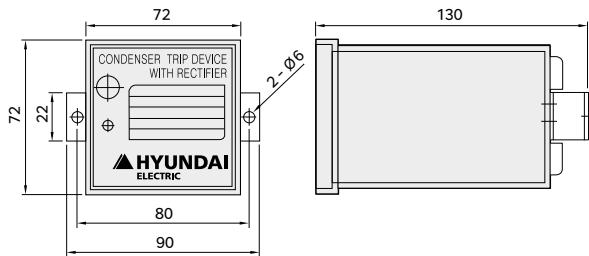

#### Ratings

Item	Details	
Rated Input Voltage	AC 110 V	AC 220 V
Normal Charging Voltage	DC 145 V	DC 290 V
Normal Current Capacity		DC 2 A
Rated Frequency		50/60 Hz
Delay Circuit Time		Within 1.5 sec
Applicable Standard	IEC 60694/KSC 4611	

#### Connection Diagram

#### Operating Sequence of CTD External Operation Circuit

- AC Input Power NO. 1, 2
- CTD Trip Power NO. 7 (+), 5 (-)
- DC Normal Power NO. 6 (+), 5 (-)

Unit : mm

## Test Jumper

- It is a device that enables the main unit to be operated independently by separating the automatic connection type of main unit from the cradle.
- As a product sold separately, place an order for HGNS AJ when ordering.

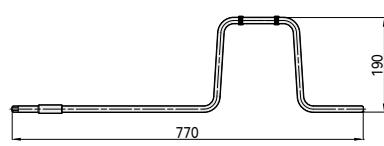

## Draw-In/Out Handle

- The draw-in/out handle for drawing the draw-in type of circuit breaker is provided basically.
- In case the standard handle is uncomfortable when drawing the circuit breaker in and out, Long Type Handle and Universal Joint Handle which are sold separately can be used.
- As a product sold separately, place an order of HGNS LHANDLE or HGNS UHANDLE.

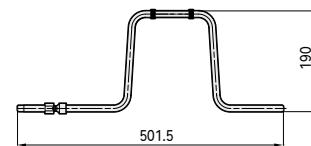

### Type

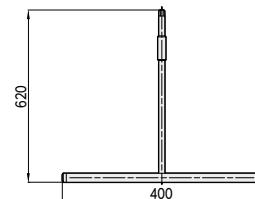

Long Type Handle

Universal Joint Handle

T-Type Handle

### Ordering Method

Name of Accessory	Order Name Placed upon Outgoing	Order Name for Separate Sales (HGNS-)	Detailed Specification
Draw-In/Out Handle	-	HGNS HANDLE	Standard Handle (Provided as Standard)
		HGNS LHANDLE	Long Type of Draw-In/Out Handle (For ACB)
		HGNS UHANDLE	Universal Joint Type of Draw-In/Out Handle
		HGNS THANDLE	T-Type, Long Type Handle

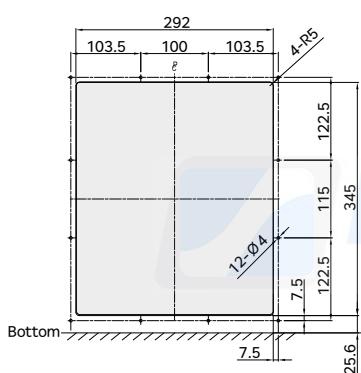

## Accessories

### Door Flange

- It is an auxiliary device mounted on the cutting part of the panel door at the front protrusion mounting type of ACB.
- The door flange of our company is IP30.
- As for the cutting dimension of the panel, refer to the external drawing.
- As for the panel cutting dimension, it is equivalent for both the draw-out and fixed type and it is the same even if the dust cover is installed.
- As a product sold separately, place an order for HGNS AG.

Panel Door Cutting Dimension

Unit : mm

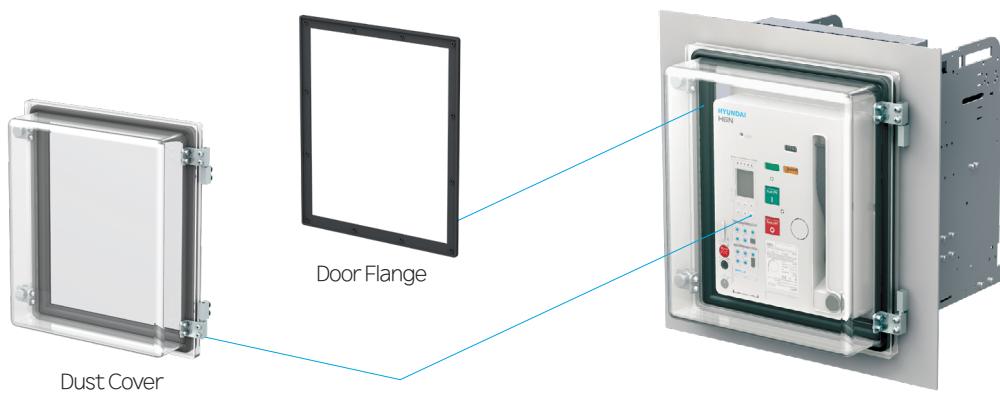

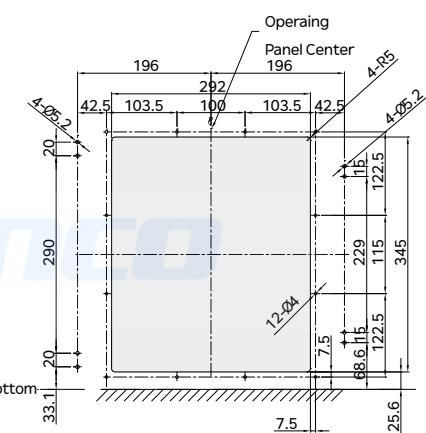

### Dust Cover

- It is a device installed to protect against dust and moisture mounted on the cutting part of the panel door at the front protrusion mounting type of ACB.
- The dust cover of our company is IP52.
- The cover can be locked in the test and connected position.
- The cutting dimension of the panel must be referred to.
- As a product sold separately, place an order for HGNS DC.

Panel Door Cutting Dimension

Unit : mm

## ATS & Controller

### Features

#### • Stable Transfer System

By applying Hyundai air circuit breaker equipped with the highest rated breaking capacity in Korea, it has outstanding protective features with regards to electric power system, making it optimal for places in which stable power supply is compulsory (Communication base station, computer center, hospital, plant equipment and other important facilities).

#### • Unmanned Working System

Unmanned power transfer is possible by applying automatic power control device in the ACB equipped with mechanical interlock device.

#### • Various Modes

Various modes is possible as it is equipped with 4 selection models for user convenience.

#### • Multi Protection Device

The multi protection device installed in ACB has self-monitoring, simple set up and various protecting functions. Unlike the existing ATS, short circuit and overload protection are possible for stable use.

#### • Compact Size, Lightweight

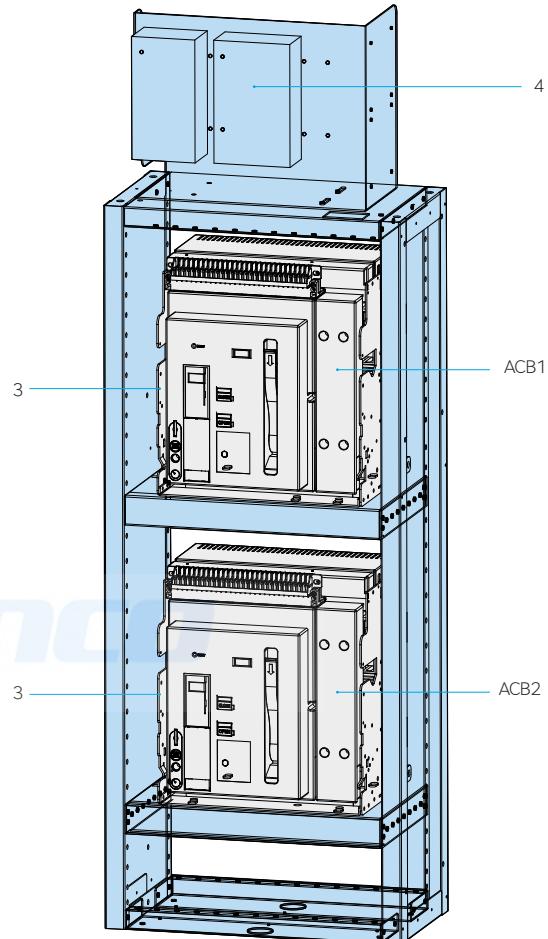

ACB is more compact and lightweight so it can easily be installed in the ATS switchgear and occupies less space.

#### • ATS Configuration and Interlock

- ACB1 : "Normal" power (Power company side)
- ACB2 : "Stand-by" power (Power generator side)
- 3 : Mechanical interlock device unit
- 4 : ATS unit

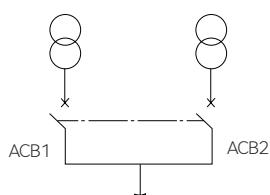

Each ACB should meet the following specifications.

- Geared charge type of mechanism (Control power of AC 220 V)
- TC (Control power of AC 220 V)
- CC (Control power of AC 220 V)
- Trip device for overload or short protection (2a contact)

### Transfer System's Interlock Conditions

ACB1	ACB2
Open	Open
Close	Open
Open	Close

※ As a product sold separately, place an order for HGNs ATS when placing an order. However, M1 has to be ordered separately and B0, BA must be added when placing an order for the product.

## Accessories

### ATS & Controller

#### Characteristics per Mode

There are 4 selection modes.

##### • Stop/Manu Mode

This mode offers On/Off functions using ACB Manual from the power company side and generator side.

##### • Auto Mode

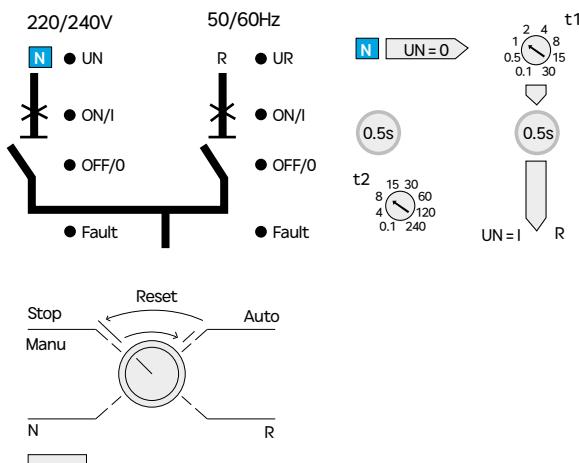

This mode is for automatically controlling the ACB depending on the sequence of system operation flow chart in the controller.

##### • N Mode (Forced Operation of Power Company Power)

This mode turns off the ACB at the generator side and turns on the ACB at the power company side by force.

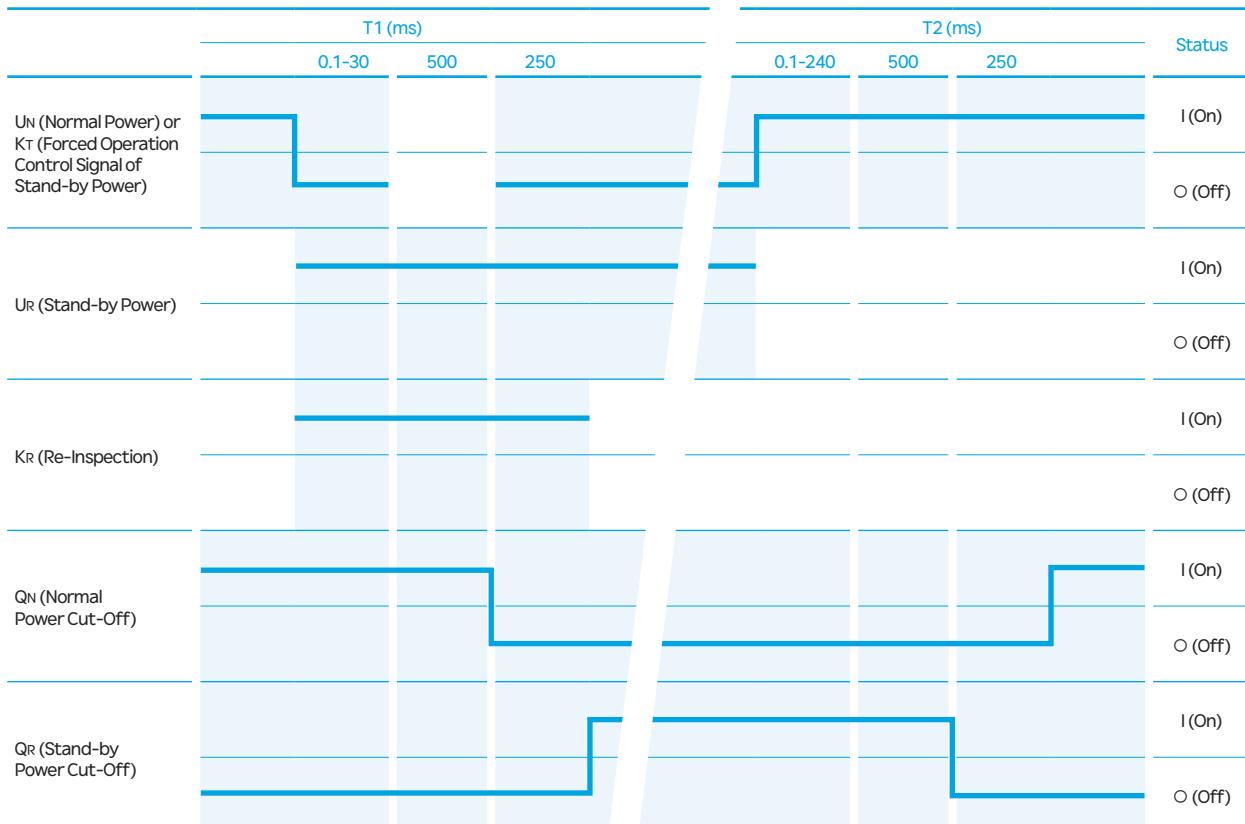

##### • R Mode (Forced Operation of Generator Power)

This mode turns off the ACB at the power company side and turns on the ACB at the generator side by force.

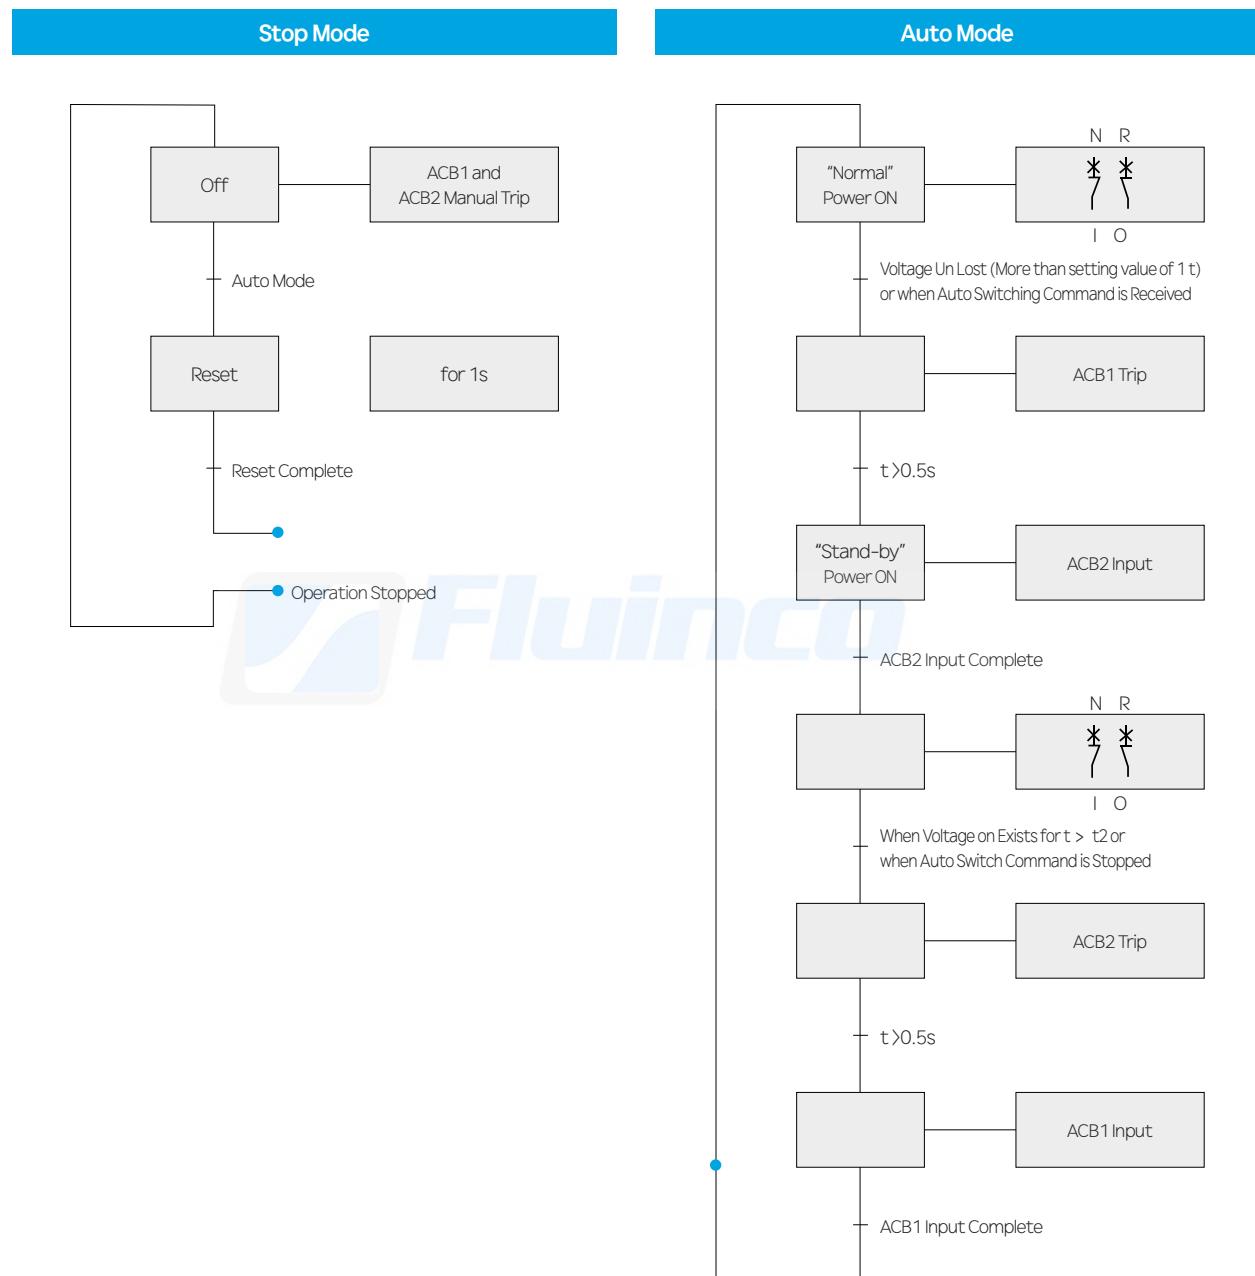

Time Delay Adjustment	Indication of the Controller's Status
t1 : 0.1 ~ 30 sec	On, Off, Fault Indication
t2 : 0.1 ~ 240 sec	(Power Company Side, Generator Side)

#### Operation Characteristics

## System Operation

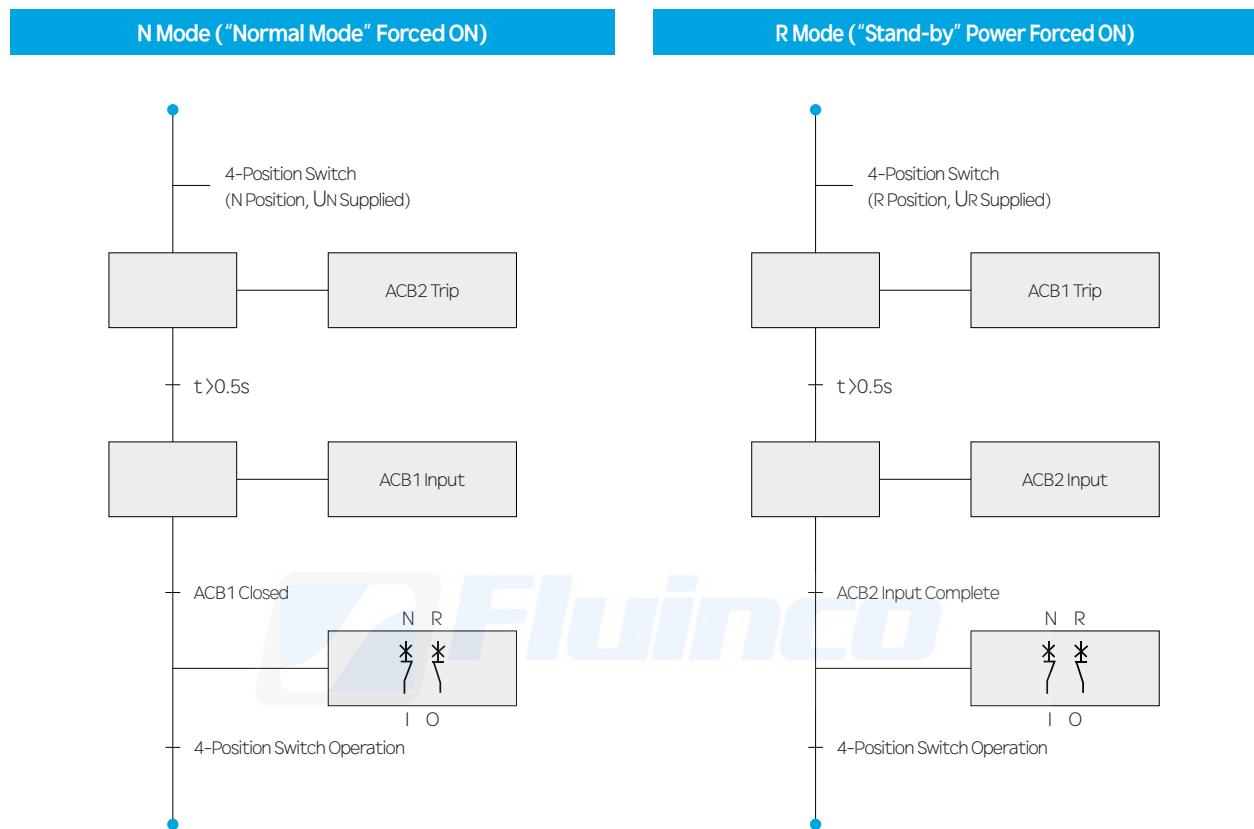

- ACB1 : HGN (S) ACB1 "Normal" Power (Power Company Side)
- ACB2 : HGN (S) ACB2 "Stand-by" Power (Generator Side)
- UN: "Normal" Power Voltage
- UR: "Stand-by" Power Voltage

## Technical Data

### Standard Operating Conditions

#### Load Rate (I/In)

- ACB cannot be used in outdoor panel in principle. In case of inevitable installation, the ambient temperature must be below 40 °C and the load rate must be below 50 % of the rated current. In case it is not complied with, it may cause heating and burning in the ACB.
- As for the total harmonic distortion (THD) rate, it must be managed below 5 % in the distribution system phase. In case it is not complied with, it may cause heating in the product.

Load Rate	Hours of Use	Effect	Installation
I/In ≤ 80 %	24/24 Hours	-	Normal Condition (Recommended)
80 < I/In ≤ 90 %	24/24 Hours	-	Periodic Inspection
I/In = 100 %	24/24 Hours	Change in Plastic Insulation Material Color	Additional Exhaust

#### Altitude

- Below 2,000 m

Item	Altitude		
	2,000 m (6,600 ft)	2,600 m (8,500 ft)	3,900 m (13,000 ft)
Isolation Voltage (V)	1,000 (1,250)	950 (1,200)	800 (1,050)
Operating Voltage (V)	690 (1,150)	655.5 (1,115.5)	552 (1,012)
Allowed Current (V)	In	0.99×In	0.96×In

※ ( ) indicates P, Q frame application

#### Protection Degree Provided by Enclosures (IP Code)

- Standard : IP30 (When the ACB front cover part of the switchboard door is cut out)
- With Dust Cover : IP52

Classification of Protection Degree Provided by Enclosures (IP code) IEC 60529

Indication : IP□□

┌─────────────────────────┐  
 └─────────────────────────┘  
 Second Characteristic Numeral : Level of preventing liquid from permeating into the external box (0 ~ 8)  
 First Characteristic Numeral : Level of preventing particulate materials from permeating into the external box (0 ~ 6)

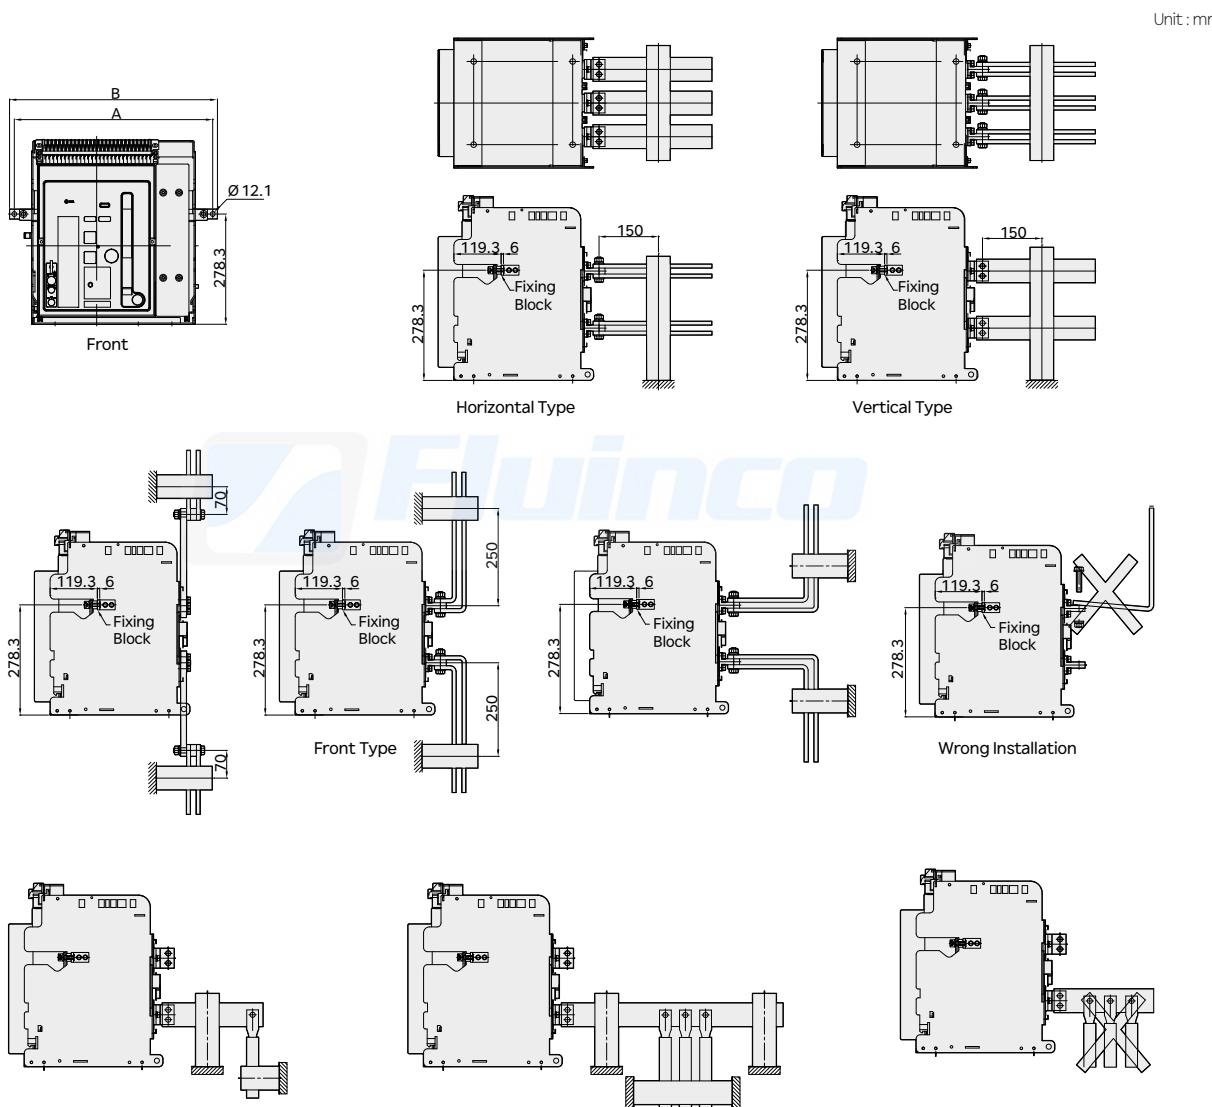

※ In the event indicating the characteristic number is not required, mark the said area with 'X'.

#### Classification Table Following the Degree

Numeral	Protection Degree	
	First Characteristic Numeral (Particulate)	Second Characteristic Numeral (Liquid)
0	No protection (Open)	No protection (Open)
1	Protected against external objects with a diameter of 50 mm and above	Protected against vertical fall
2	Protected against external objects with a diameter of 12.5 mm and above	Protected against falling with a gradient of 15 °
3	Protected against external objects with a diameter of 2.5 mm and above	Protected against falling with a gradient of 60 °
4	Protected against external objects with a diameter of 1.0 mm and above	Protected against spraying water from up, down, left, right (Splash proof)
5	Protected against deposition risk of dust and others	Protected against spraying water from up, down, left, right (Hose proof)
6	Complete protection without deposition of dust and others	Protected against heavy rainfall and tsunami (Deckwater proof)
7	-	Protected against submersion under certain pressure and certain time (Immersible)
8	-	Protected against complete submersion (Submersible)

## Product Installation Condition

- In order to prevent burning of products caused by electrical fault and to enhance structural safety of the panel when installing the product in areas with concerns of vibration, mount the fixing block and install the terminal supporting position like the figure.
- In particular, when executing short-time/short-circuit panel testing, it must be installed for structural safety.
- For the support dimension of the product, refer to the drawing.
- In the event of switchboard (Panel) development test (Short-time, short-circuit), the bus bar inside the panel must be supported firmly according to the following conditions.

Model Name	A	B
HGN 06 ~ 20A 3P, HGS 06 ~ 16A 3P, HGN 06 ~ 20P 3P	416	440
HGN 06 ~ 20A 4P, HGS 06 ~ 16A 4P, HGN 06 ~ 20P 4P	501	525
HGN 20 ~ 40B 3P, HGS 20 ~ 32A 3P, HGN 20 ~ 40Q 3P	487	511
HGN 20 ~ 40B 4P, HGS 20 ~ 32A 4P, HGN 20 ~ 40Q 4P	602	626
HGN 40 ~ 50C 3P	712	736
HGN 40 ~ 50C 4P	906	982
HGN 40 ~ 63D 3P	854	878
HGN 40 ~ 63D 4P	1,084	1,108

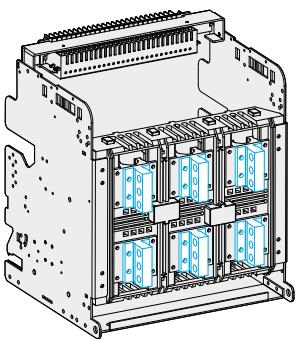

## Technical Data

### Connection Method

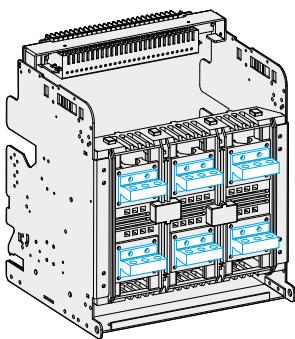

User convenience has been reinforced by allowing each terminal to be rotated 90 degrees directly on site depending on the busbar type of low voltage switchgear.

(Lower) Front Type

(Upper) Front Type +  
(Lower) Vertical Type

(Upper) Front Type +  
(Lower) Horizontal Type

※ Terminal change is only possible for HGS/HGN A, P frame 630 ~ 1,600 A, B, Q frame 2,000 ~ 3,200 A.

Front type is a terminal form that is suitable for switchgear with spatial restrictions.

Horizontal/vertical change above 4,000 A requires separate parts so please contact our company.

In case of B, Q frame, 3,200 A terminal is provided as for the front type provided separately for 2,000/2,500 A.

Front type terminal has to be purchased separately.

## Convenient Connection Method

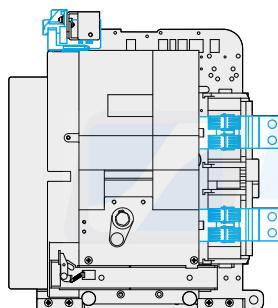

As for HG Series air circuit breaker, 4 types of mounting (Connected, test, isolated, removed) are possible and offer easy maintenance.

Sliding Body Type (In Case of Draw-In/Out Type)

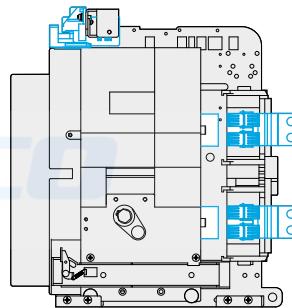

### Connected Position

As a commonly used status, the main circuit and control circuit are both connected.

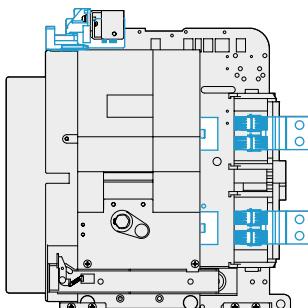

### Test Position

As a status in which the main circuit is isolated and the control circuit is connected, the circuit breaker can be turned On/Off with the switchgear door closed.

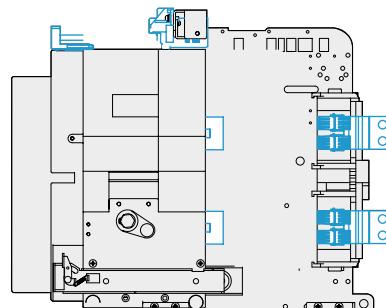

### Isolated Position

With the main circuit and control circuit both isolated, the air circuit cannot be turned On/Off.

### Removed Position

The air circuit has completely been removed from the cradle.

## Technical Data

### Internal Resistance and Power Consumption

Model Name	Rated Current (A)	Fixed Type		Draw-Out Type	
		Internal Resistance ( $\mu\Omega$ )	Power Consumption (W/3Phase)	Internal Resistance ( $\mu\Omega$ )	Power Consumption (W/3Phase)
A Frame HGS/HGN 06 ~ 16	630	20	24	40	48
	800	20	38	40	77
	1,000	20	60	40	120
P Frame HGN 06 ~ 16	1,250	20	94	40	188
	1,600	20	154	40	307
	630	15	18	30	36
A Frame HGN 20	800	15	29	30	58
	1,000	15	45	30	90
P Frame HGN 20	1,250	15	70	30	141
	1,600	15	115	30	230
	2,000	13	156	27	324

※ The abovementioned power consumption is the total power consumption of the circuit breaker based on 50/60Hz, 3/4 pole.

The inner resistance value is the resistance value per pole. Power Factor = 1.0

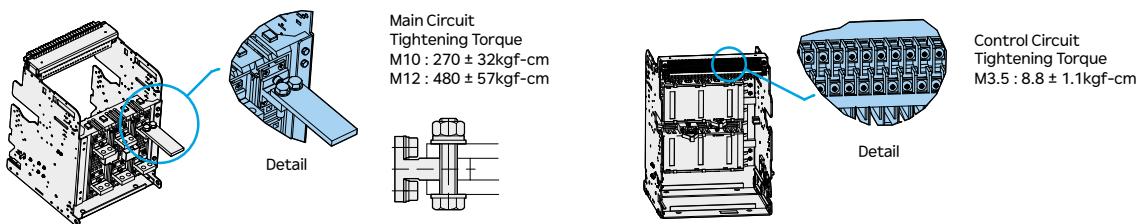

※ The internal resistance mentioned above is the factory default value. It may slightly increase depending on the operating environment (load conditions, short circuits, load switching, and other ambient conditions) and the duration of use.

Regular inspections and maintenance are recommended.

※ Contact resistance may increase after 1~2 years. Wiping the contact surface with an alcohol-dampened towel can reduce contact resistance.

Model Name	Rated Current (A)	Fixed Type		Draw-Out Type	
		Internal Resistance ( $\mu\Omega$ )	Power Consumption (W/3Phase)	Internal Resistance ( $\mu\Omega$ )	Power Consumption (W/3Phase)
B Frame HGS/HGN 20 ~ 32	2,000	10	120	20	240
	2,500	10	188	20	375
Q Frame HGN 20 ~ 32	3,200	10	307	20	614
	2,000	10	120	20	240
B Frame HGN 40	2,500	10	188	20	375
	3,200	10	307	20	614
Q Frame HGN 40	4,000	8	384	11	528
	5,000	8	600	11	825
C Frame HGN 40 ~ 50	4,000	8	384	11	528
	5,000	6	288	9	432
D Frame HGN 40 ~ 63	4,000	6	450	9	675
	6,300	5	595	7	833

### Tightening Torque

### Insulation Voltage

When designing the switchboard, maintain the insulation distance in accordance with the table below.

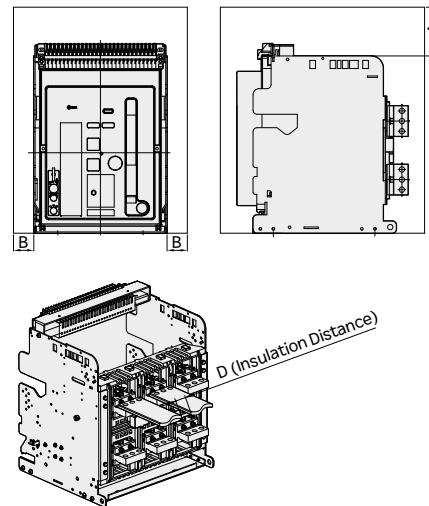

#### Insulation Distance from ARC

Unit : mm

Item	A	B
Fixed Type	150	50
Draw-Out Type without Arc Shield	150	50
Draw-Out Type with Arc Shield	0	50

#### Minimum Insulation Distance at Charging Side

Insulating Voltage	Minimum Insulation Distance(mm)
Below 600 V	8
Above 600 V, below 1,250 V	14

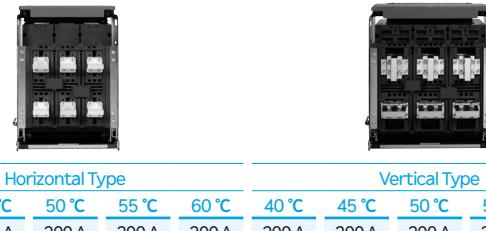

## Calibration of Rating Current

### Calibration of Rating Current Following Ambient Temperature and Motion Specification

※ The ambient temperature is based on the external temperature of the circuit breaker and the motion that can be applicable to the circuit breaker is applied.  
The motion is based on copper material with no separate painting.  
The maximum allowable temperature of the motion is below 100 °C.

※ The above table represents the correction values for individual applications.  
※ When installing inside a panel, please apply the Derating Table.

### Calibration of Rating Current Following Altitude

ACB is designed to be used at altitudes below 2,000 m.

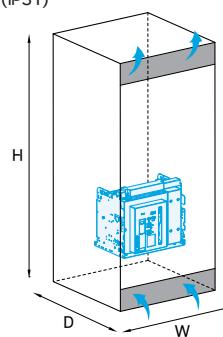

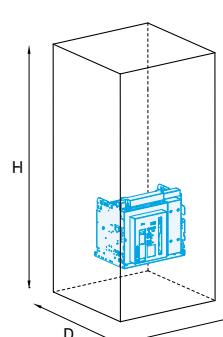

When used at above 2,000 m, change the ratings depending on the surrounding environment condition for use.

Item	Altitude	2,000m	3,000m	4,000m	5,000m
Withstand Voltage (V)		3,500	3,150	2,500	2,100
Average Insulating Voltage (V)		1,000 (1,250)	900 (1,125)	700 (1,000)	600 (875)
Max. Operation Voltage (V)		690 (1,150)	590 (1,035)	520 (920)	460 (805)
Current Calibration Coefficient		1×ln	0.99×ln	0.96×ln	0.94×ln

※ () indicates P, Q frame application

Panel dimensions (mm) : W×H×D	800×2,300×900							
Area of outlet vents (IP31)	350cm <sup>2</sup>							
Area of inlet vents (IP31)	350cm <sup>2</sup>							

※ 1) Ambient temperature Ta refers to the temperature outside the panel (per IEC 60947-1).

2) The rated current should meet the performance satisfying the temperature requirements of IEC 60947-1 and 2 when installed inside the panel, using additional current derating and recommended conductor sizes.

3) Ventilation structure should be designed to allow temperature reduction for products installed inside the panel.

4) The above Derating Table represents the maximum current for the selected circuit breaker under panel conditions.

5) To reduce the temperature inside the sealed panel, forced ventilation devices must be added.

6) For ACB product ratings, the specifications of the panel busbars, vertical/horizontal arrangement, air circulation, presence of vents, fans, and IEC temperature rise test conditions create variables in the operating environment. Therefore, the ratings of circuit breakers and panels may differ. Thus, when selecting the circuit breaker rating, consider the actual safe load of the panel (up to 30%) to ensure the safety of the panel's actual load.

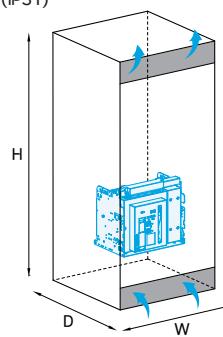

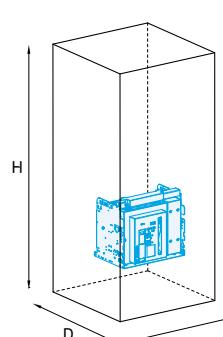

Ex) Actual load 2,850A × 1.3 = 3,705A → Select 4,000AF.

Under the conditions of the Derating table above, the load factor should be less than 70% of the rated current. If the designated busbar size is smaller, it can cause temperature rise due to reduced busbar cross-section. To protect the load, the current load factor must be reduced to a safe range.

- U□ is only applicable when instantaneous type and only the UVT coil is installed. When using time delay type, place a separate order for the time delay type of controller (HGNS ~) and install externally.
- V□ is only applicable when time delay type is applied and the UVT coil is installed in the main unit while the time delay type of controller is installed at the side of the cradle. In case of dimension issues, place an order for HGNS V□ for separate installation.
- When S□ Secondary trip is applied, UVT coil cannot be applied at the same time.
- When using T□ trip coil monitoring contact, it becomes 4a4b and when using MCR function of B8 OCR, it can be used as 4a5b. When both functions are applied, 3a4b can be possible.
- In the order code for the main unit only (A/J/Fixed type), combination with cradle accessories is not possible and the cradle accessory arrangement is only possible when purchased with cradle arrangement. For the independent release of the main unit, place a separate order (HGNS ~) (refer to additional components).
- Position switch cannot be overlapped for use and can only be attached only at the right side of cradle. In case a combination other than the combination indicate is required, make an inquiry separately.
- Mechanical interlock device (B0), external auxiliary contact (MC), fixing block (AF) and Door Interlock (D0) cannot be used together.
- BC : The control terminal's safety cover is only available for the auto connection.
- AK : Short "b" is only available for auto connection and is attached to 51, 52. It can be attached as much as the number of "b" contact so upon additional mounting, place a separate order (HGNS ~).
- AG : Originally, it is attached separately but upon release, the front cover is inserted when shipped.
- AA and BA (BH) cannot be attached at the same time.
- UVT and Secondary Trip Coil cannot be attached at the same time.

- DHS12/16A (W) > DHS12 ~ 16A (W)
- DHS20B (X) > DHS20B (X)
- DHS25B (X) > DHS25B (X)
- DHS32B (X) > DHS32B (X)

※ 1) P frame 2,000A is only implementable for vertical terminals.

2) Fixed connection terminals P type are customer-installed after separate ordering. (Refer to separate shipping item)

Applicable frames are only applicable for P06 ~ 16, Q06 ~ 32.

3) Arc shield is provided as a complimentary for P, Q frames.

	-	HGNS FDIBD	Fixed type Door Interlock external attachment Kit + B, D, Q Frame internal interlock components (D0)	Sold Separately	-

## Handling and maintenance inspection

### Standard Operation Conditions

| Ambient Temperature | -5 ~ +40 °C

(Daily average temperature of below 35 °C)

| Altitude | Below 2,000 m above sea level

| Relative Humidity | Below 85 % (Below daily average of 85 %)

The surrounding environment may affect the insulation performance and durability of the circuit break so the operation conditions must be checked clearly before application.

In case of operating in high ambient temperature exceeding 40 °C, use according to the derating calibrated depending on the ambient temperature indicated in the catalogue.

In case of operating in places with high humidity and frequent rain, the insulation or electrical performance may drop.

In case of storing and using in places with a lot of dust and humidity, the use of a dust cover or dehumidifier is recommended. Excessive impact and vibration may cause damage in the operation mechanism.

When storing circuit breaker without electric circuit : -25 °C ~ 85 °C  
When storing circuit breaker with electric circuit : -15 °C ~ 70 °C  
After storing in low temperature, store for more than 8 hours in room temperature then store in an open location for the type with charging motor.

In case there is a lot of corrosive gas, it must be stored in an enclosed protective structure to minimize damage.

In case of highland with high altitude, the insulation performance drops so please apply the highest rating product after checking the insulation performance calibration coefficient.

### Special Operating Conditions

The HG-Series air circuit breaker has been designed/manufactured to operate in a standard operating environment designated by the IEC standard and in case of operating the circuit breaker in the following special environment, contact our company.

- In case the altitude above sea level and the ambient temperature exceeds the standard operating environment
- In case of a region with a lot of sea wind or salinity
- In case of a region with snow and freezing
- In case of a region of frequent shock and vibration
- In case the relative humidity exceeds the standard operating environment
- In case of a region with a lot of humidity and frequent rainfall
- In case of a region with a lot of dust, vapor, corrosive and combustible gas, wet steam
- In other special environment that exceeds the standard environment

※ Special operating environment and condition may cause damage in the product (Increase in resistance at main circuit, rust, change in coating).

## Maintenance inspection

### Regular Inspection

Inspection Form	Main Review Item	Inspection Item		Inspection Period
		Details and Countermeasures		
General Regular Inspection	Foreign Substance	Visual examination must be executed and there must be no foreign substance inside. Blow away the foreign substance using compressed air.		Every 6 months
	Gap	Execute visual examination and there must be no cracks or gaps.		Replace, repair
	Operation	Circuit breaker must be closed manually to inspect the operation area during normal status.		Once a year
	Greasing	Apply an adequate amount of grease on each pin, axle and bearing. Excessive greasing may cause dust and stain from building up. Electrical grease : HITALWBE 28G Lubricant grease : Kamro Chemical/CHEMAX HHI 5000#1.		Every 6 months
	Spring Type	The status of the spring must be checked to inspect the damaged area.		Replace, repair
	Screw/Bolt Type	Tighten loose areas using screw or bolt.		Every 6 months
	Stain on the Fastening Bolt Area	There must be no dust or stain at the fastening area. Wipe the area well using clean cloth dipped in alcohol.		All the time
	Below 2,500 AF	Total operation frequency : 3,000 times	Non-current 2,500 time, current 500 time	Paid inspection is required (Precision inspection)
		Open/closing frequency : 500 times	Open/close within the range of rated current	Inspection period : At least 6 months after exceeding the opening/closing frequency Precision inspection once a year is recommended
		Open/closing frequency : 25 times	Open/close in over-load (Around 6 times the rated current) area	
		Immediately upon breaking	Prevent short-circuit/earth fault	
Mechanical Durability Warranty Lifespan Inspection (Based on IEC60947 standard)	Above 3,200 AF	Open/close frequency : 2,000 times	Non-current 1,500 time, current 500 time	
		Open/close cycle : 500 times	Open/close within the range of rated current	Contact our company to determine if replacement is required
		Open/close cycle : 25 times	Open/close in over-load (Around 6 times the rated current) area	
		Immediately upon breaking	Prevent short-circuit/earth fault	
		In case foreign substance has melted onto the grid's side plate, replace the ionized pieces inside the arc chamber and others.		
	Arc Chamber (Grid)	Remove foreign substance, dust and oil.		Replace, contact our company
		Melting stains on the contact tip surface is caused by open/closing arc.		
Arc Contact	Contact Tip Surface	In case the extent of melting caused by arc reduces to 1/3, replace the entire operation and fixing moving contact unit.		Visual inspection, no problem Replace, contact our company
		However, in case there is foreign substance on the contact, precision diagnosis is required to determine if replacement is necessary through our company's paid service.		
Main Contact	Damage of Main Contact	In case the main contact has been worn off and is rough, the surface must be managed neatly.		At all times
		However, in case there is foreign substance on the contact, precision diagnosis is required to determine if replacement is necessary through our company's paid service.		

#### ⚠ Caution

1. In the event the contact or part is replaced, turn the circuit breaker off and replace after drawing out the disconnected position to isolated.
2. Execute the inspection work after checking whether the remaining heat in the conduction part has been dissipated. It may cause burns.
3. When rubbing the contact tip, ensure that the sludge does not enter the circuit breaker's mechanical device. After rubbing, wipe the contact tip neatly.
4. Please refer to the instruction manual for detailed information when disassembling and assembling.
